Teka Group, a wide range of solutions in all divisions

Teka is a European industrial group founded in Germany in 1924. With over 90 years of experience, the Group is a company committed to the production and manufacture of home kitchen appliances, professional kitchen products, taps and faucets, bathroom products, vitrified and industrial containers.

Continuous investment has led the Group to become one of Europe's leading companies in its sector and the world's leading manufacturer in stainless steel beer kegs and industrial containers. With headquarters and a centralized logistics platform in Europe, Teka is present in more than 110 countries worldwide, offering a complete product range under different brands through its 3 divisions (Kitchen and Bath, Professional Kitchen and Container).

Kitchen and Bath

The Kitchen & Bath Division is Teka Group's largest business unit. With 17 factories in Europe, America and Asia-Pacific, the division is the leading European manufacturer of stainless steel sinks and built-in kitchen appliances: ovens, hobs, hoods, etc. As a technology manufacturer offering fully integrated and diversified product ranges, Teka Group provides integrated kitchen and bathroom solutions and powerful trade appliances to complement to its production offer.

Professional Kitchen

The Professional Kitchen Division designs, manufactures, markets and services a broad line of standard modular and tailor- made kitchen and catering equipment for hotel chains, restaurants, educational centers, hospitals, airports and sports clubs, among others. Its high-quality technology and European design have earned it prestigious recognition within Europe, such as the Küche Award in 2013. Products are manufactured to customer specifications, but can be grouped into 5 main categories:

- Modular cooking units
- Convection and steam ovens
- Server and catering equipment
- Stainless steel furniture
- Mobile kitchens

Container

This division is specialized in the manufacturing of high-quality stainless steel containers. One out of three beer kegs in the world is produced by Teka, which makes us the global leader in this sector with an approximate 35% market share. Among the container division's clients are the world's most important breweries, in addition to chemical, pharmaceutical and food-service companies.

The Container Division produces and markets containers ranging from 5-liter pressure vessels with a maximum capacity of 3,000 liters to 10,000 liters storage tanks.

Other products manufactured are; container systems for storage, transportation, blending and packaging of bulk solids or appliances with high-grade alloy components.

Teka, a worldwide company

With a worldwide presence, including **27 factories in 3 continents** and **subsidiaries in 33 countries,** the Group trades in **over 110 countries, 5 continents.**
We strive to reach and maintain the highest quality certifications in compliance with the strictest environmental standards.

Teka Brand

One of Teka's main commitments is towards the enhancement of brand awareness, as an intangible added value, hence our active involvement in promotional events and sports sponsorship for over two decades. In recent years, Teka has supported teams in a range of sports such as cycling, handball and soccer. Probably our largest and most successful sponsorship deal was with Real Madrid FC. So close was the partnership between these two international names that it is almost impossible to recall a Real Madrid championship win without the Teka logo on the players' shirts.

"A brand with a great history and a bright future"

Teka, our values are our advantages

As a solid and reliable brand, Teka has achieved an outstanding prestige among customers worldwide. A perfect choice backed up by the following key points:

- **Experience:** Over 90 years of experience, becoming a renowned brand with strong values such as the Teka direct warranty, an effective after sales service and our European design.
- **Broad offer:** The Group provides a full range of products such as sinks (stainless steel, granite, and synthetic), kitchen appliances, bathroom solutions, tailor-made containers, faucets and taps or stainless steel sanitary systems.
- **Quality:** An extraordinary quality backed up by a large number of certifications such as the ISO and international awards. Sample testing and random inspections are carried out on deliveries to assure complete product and process quality. This search of perfection has led us to receive recognition, for example the 9 international awards we won in 2013-2013.
- **Solutions:** The Group is a comprehensive supplier of comprehensive solutions and covers broad segments to attend to any customer's needs. We have a global reach with a local presence, always with stainless steel as our core business.
- **Innovation:** A business development philosophy and a guarantee of total client satisfaction. The Hydroclean® oven-cleaning system and the revolutionary Ihood® are clear examples of the result of our constant innovation and training programs.

Frame is an entirely new generation of kitchen sinks.

It is a timeless design which emphasizes form and function rather than simply a dazzling exterior.

Designed and engineered with the customer's needs in mind, the Frame series of innovative kitchen sinks brings both practicality and beauty into the kitchen. Most common bowl configurations and all installation systems are available under the same constructive platform.

EXPRESSION

Expression

The language of stainless steel

Stainless steel speaks for itself. No other material has its individual properties and no other material is able to create the richness of the shadows and shapes it can offer. Angles and curves combine in a continuous line of beauty, in perfect harmony with a new kitchen concept.

Expression 1B

· 25 mm bowl radius.

EXPRESSION

Minimalism at its best

Belief in every minute detail

With the Expression premium series, we are proud to present even more geometric and minimal lines than ever. The unique design surpasses time and fashion, showing the way to a new concept where adaptability will reign. Enjoy being amazed by the essential.

The essence of Expression is transmitted through resilient materials such as stainless steel and glass, materials capable of conveying subtle sensations to our senses without distraction, enabling us to go on creating unhindered.

Pure minimalism stripped down to its very essence, embodied in a brand new sink series. For us, every curve, every angle has a meaning, a representation of our belief in the *Expression 'evolution'*.

Express yourself

We believe most of the acknowledgements of this product will be for the outstanding design of the drainer and its clearly identifiable X as a representative pattern of the word *Expression*. However, what is even more remarkable is the cutting-edge technology that has been specially developed to create a new series of deep bowls that configure the entire Expression series. Creating the 25 mm chamfered bowl and making it aesthetically pleasing is a technical wonder.

The Expression series also comes with accessories. The dark black glass table fits perfectly on the draining and bowl areas, enhancing the sink's functions.

The collection of taps and faucets relies not only on its inner values, but also captivates through its forms. Pure geometry and carefully-selected materials, and the result is an authentic and unique collection for today, tomorrow and every day. The kitchen sink would not be complete without a faucet. Both products are strongly linked as they must work individually and together. New tap models have been designed to fit the Expression concept, as we consider our products not as sinks and taps, but as cleaning centers.

For further information about Teka's premium Expression series, visit the website or ask for a detailed catalogue.

The first touch control sink

Innovation is finally at home

Bringing functional innovation into the world of sinks is a real challenge. For decades it seemed that the road to technical improvements was muddy and inaccessible. But with passion and dedication, Teka has come up with a new sink that is controlled by a touch control system.

As with ovens, hobs and other home appliances, sinks can now be easily managed with the simple touch of a finger. 17 temperature and 5 water volume levels are accessible through the touch control thanks to the electronic tap.

The tap and touch control are included with all iSink models, so there is no need to worry about anything. This is life made simple. This is Teka.

Lux 1B 1D 78

Lux 1B 1D 86

Expression Lux 1B 1D 86

Expression Lux 2B 86

From the very beginning we knew they were meant for one another. The perfect couple, but it was time to break the rules and go further, leaving behind old clichés stuck in the mud of time. We introduced them, and as their bond grew stronger, they both committed to give their best.

After their beauty it was resistance, after their toughness it was wisdom.

Cuadro

Four sides and a thousand advantages

"Cuadro" is Teka's line of stainless steel sinks with four key ingredients. A new kind of working area, a new collection, a unique design and a partner vocation.

The style of the "Cuadro" is boldly innovative: Cuadro sinks give a sense of order that sits perfectly with modern as well as classic kitchens.

Reversibility is 100%. Change to Cuadro and see life from a different perspective.

How to keep your Teka sink in perfect condition

Make it timeless

Timeless. Elegant. Like fine silver, its beautiful finish enhances with age and use. But this does not mean you can neglect the care of this essential kitchen item. As a rule, stainless steel's best friend is cold, clean water or a mild detergent solution, applied with a soft sponge, rinsed well and wiped dry.

Here are some products or elements that can damage your sink:

Chlorides

Chlorides are found in almost all soaps, detergents and cleaning products and can damage stainless steel. They are water soluble, however, so if you rinse away the residue after each use, a weekly scouring is all that is needed to keep your sink looking bright and shiny.

Scratches

Like most metallic surfaces, your stainless steel sink will scratch. Don't worry; these are simply usage marks which will eventually blend into the overall finish of the sink.

Knives

Your sink is designed to serve as many things but one of these is not a chopping board. This type of use will cause deep scratches in its surface, and will also blunt your knives. For additional work space, choose from our wide range of chopping boards.

Water Quality

The quality of your water can affect the appearance of your sink. When water has a high iron content, a brown surface stain can form on the sink giving the appearance of rust. Also, in areas with a high concentration of minerals or over-softened water, a white film may develop on the sink. To combat these problems, we suggest you wipe the sink dry after each use and give it a more thorough clean each week using a recommended abrasive product.

Foods

Foods containing high levels of salt should not be allowed to dry on the sink surface. Rinse your sink thoroughly after use.

Stena 45 E

Stena 45 B 1B 1D

Stena 45 OB

Stena 50 B 1B 1D

Stena 60 B 1½B 1D

The virtues of the Stena range lie in straight, thin lines and clear draining space. No interference is allowed on the spectacular drainer, which hides a special secret in some models: the bowl overflow, an extra feature that complements this minimalist and modern range.

Teka offers all the options you can think of

Explore all possibilities

In the master catalogue, most products are shown in their most complete version. Each model offers several alternatives depending on the customer's requirements: from fully equipped models to basic ones. There are no sink product codes in this catalogue due to the fact that there are more than 50 versions available for some of the products.

See below the Universo 1½B 1D model options according to the most relevant features.

Reversibility

Yes (without holes)

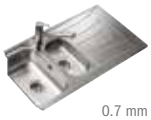
Yes (2 holes)

No (left version)

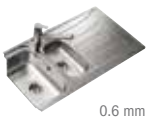
No (right version)

This refers to the possibility of it being installed in either right or left versions, as the sink is totally symmetrical. The presence of tap holes or pop-up system indicates the lack of reversibility.

Thickness



0.7 mm



0.6 mm

This relates to the characteristics of the raw materials. It usually varies from 1 mm to 0.6 mm depending on the quality of the sink and the depth of the bowl. The measurement can also vary from the drainer to the bowl due to the manufacturing process.

Finish

Matt

Polished

Microtextured

There are several stainless steel finishes available, according to the customer's preference. The mechanical characteristics of the materials remain the same, but it differs from an aesthetic point of view in the polishing: gloss, matte or textured finishes are available.

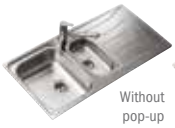
Overflow

Without overflow

With overflow

Teka, as a global supplier, produces sinks for markets where overflow is unnecessary; therefore there are codes with and without this security system to avoid home flooding.

Pop-up



Without pop-up

With pop-up

This practical system takes care of drainage via a button on the drainer surface, allowing users to empty the bowl without the unpleasant contact with hot water, detergent or small food residues. The pop-up also makes it easy to close the drain or fill the bowl with water.

Packaging

Individual box

Five units box

Cardboard protector on pallet

Practical and protective, the packaging is also a key factor affecting price when delivering goods from factories. The possibility of sending bundles or pallets reduces the overall cost when individual packaging is not an issue.

Waste

Normal waste

Basket waste

Standard 3 ½ or 1 ½ wastes or the practical 3 ½ basket waste traps the food particles left from washing up or cleaning vegetable or fruits so that they do not enter the sewage system.

Fittings

Teka sinks provide all the fittings needed to install the sink. It is also possible to order less complete sinks as some plumbers and installers have their own suppliers for such elements.

Cosmos

Huge possibilities – as the name suggests

A new Teka sink line based on a minimal and functional design but without leaving out small details that emphasize concepts like perfection and beauty.

Two pathways defined by an exceptional drainer that brings the power and coolness of high quality stainless steel crafted with imagination and control.

Paint the ideal sink in your mind. Can you see the Cosmos?

900

Eurora EU 60

Eurora EUP 60

Eurora EUP 80

Practical, pure in style and more than just a little different. These principles are necessary to take some products beyond the standard.

The Eurora series revolutionizes the kitchen sink industry by combining the traditional rectangular shape with a modern subtlety and organic expression of form. The result is a range of sinks taking user-friendly form to a whole new dimension.

The Eurora range has been awarded the prestigious Award for Design Excellence by the Norwegian Design Council.

Not all stainless steels are the same

Teka only picks the best quality

Brush polished finishing

Polished finishing

Microtextured finishing

Bright polished finishing

Kitchen sinks have been manufactured in a wide variety of materials, from wood up to the latest composites. Each has its benefits, and the right one for you will depend on your needs. All sinks, no matter which material you select, will eventually show signs of wear and tear, but they should also be able to withstand the rigors of everyday use for a very long time.

The most popular material for kitchen sinks today is stainless steel. Note, however, that not all stainless steel sinks are the same. The first thing to look at is the chrome-to-nickel ratio. Chrome increases hardness and wear resistance, and provides the stainless steel with luster and durability. Nickel increases strength and improves shock resistance.

Stainless steel is non-porous, superbly hygienic, rust-free, heat resistant and extremely durable. Only well-known brands use this premium quality stainless steel as standard in their production process, giving a lifetime guarantee that your stainless steel sink will not chip, flake or, of course, crack or break.

The chrome-nickel grade is not only important for durability. Some stainless steel sinks look bright and shiny at first, but soon rust and corrode because the combination of chrome and nickel is not exactly right.

Stainless steel technology

As a leading stainless steel sink manufacturer, Teka uses the latest technology to offer the best finish.

For instance, most Teka sinks incorporate pressed installation rails or pressed bowls, so we eliminate the welding and sanding operations that can damage the appearance of sinks and cause their prices to be higher.

Stainless steel thickness

The thickness of the stainless steel is probably the main point to check when buying a sink. The thicker the steel, the less susceptible it is to denting, bowing, noise, temperature changes and damage from hard knocks of pots and pans. Teka sinks are available in several stainless steel thicknesses depending on the model.

Stainless steel finishes

Most Teka stainless steel sinks have what is called a polished finish. This elegant finish creates an enduring, easy-to-clean luster that is impervious to water stains and calcium deposits. The polished finish requires numerous hand and machine buffing operations which produce a beautiful luster design.

For those who prefer a brushed appearance, another option is the normal satin finish. Abrasive grinding produces a uniform pattern of satin finish lines on the metal surface.

Teka stainless steel sinks are also available in linen or micro-textured finishing, which offers an attractive high relief pattern on the sink's surface. This exclusive finish is also made from 'surgical' stainless steel, i.e. with all the stainless characteristics.

The stainless steel hard-plus finishing achieves better results than standard stainless steel thanks to the special treatment applied to the surface that improves its hardness and resistance against scratches, making it an everlasting perfect piece of design in the kitchen.

Installation systems: which one suits you best?

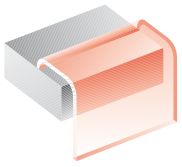
Easier, faster and much more efficient

When choosing the model and colour of your sink, you must also decide which type of installation you would prefer:

Lay-On

Teka lay-on sinks come in a wide range of measurements, so you can find the best fit for your cabinet size. Select between different configurations of drainers, bowls, reversible or back-stand models, overflows, tap holes, wooden frames, etc. The options are as varied as your needs.

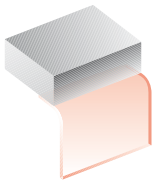
Lay-on sinks can be delivered with wood supports at the sides (below the rim) to aid installation while providing structural reinforcement.



Inset (Drop In)

Kitchen sinks were traditionally 'drop-in'-style, that is, with the rim of the sink sitting on the work surface. Teka drop-in sinks can be mounted on virtually any worktop using Teka clip-and-bolt fasteners, which adjust to the thickness of the surface for a tight, non-slip fit. The sink is fastened to the worktop from underneath, with no screws or bolts show.

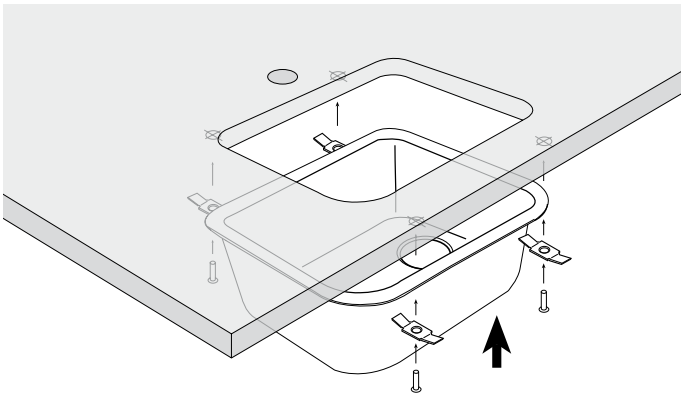
The drop-in design has a small rim to stop water spilling onto the work surface. Some drop-in sinks can also be undermounted using special undermount clips.

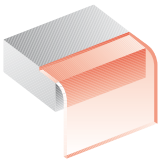


Undermounted

With solid marble, granite and modern composite materials counter tops, undermounting the sink has become a popular option. The Teka undermount sink is mounted and caulked from underneath using the special clips provided. Undermounting gives the sink and surrounding area a much sleeker appearance. It prevents dirt from getting trapped around or below the rim and it is absolutely waterproof when installed correctly.

Teka sinks come with cutting templates and easy-to-follow fitting instructions.





Integrated (Flush)

Probably the most perfect installation system, providing a totally seamless working area which is also aesthetically pleasing. The sink and work surfaces become one solid unit, free of awkward edges and corners.

Some undermounted models can also be installed this way.

Need help choosing the right sink?

Issues to bear in mind when buying a sink

Sink configuration

Even though the bowl (number, size, depth, shape) is the main feature of the sink, it is not the only thing to bear in mind. There are other options that can make your sink more user-friendly and provide you with a nicer working area.

Drainers extend your working area and allow for easy clean-up as well as food preparation. They will also keep the work surface clean and dry.

Teka colander bowls are available in either half or quarter bowl sizes. They can be used for rinsing, draining, straining and clean-up. Whatever your sink space, a colander bowl will give you another functioning utensil.

Relationship between sink size and capacity

- Bowl depth, taper and radius are the three basic measurements for comparing sink sizes. Depth, of course, is the distance from the top of the rim to the bottom of the sink at the point nearest the drain.
- Bowl taper is the inward slope of each side of the sink from the rim to the bottom. Radius is the measurement of the bowl's corners and bottom where the sides and bottom meet.
- One point to remember: The deeper the bowl, the straighter the slope, the smaller the radius, the bigger the capacity.

Accessories

Teka's optional accessories let you make the most of your sink, as they have been especially designed for each individual model. Crockery baskets, plate racks, colander bowls, chopping boards, waste disposal units etc. will quickly become an indispensable part of your kitchen routine.

The correct care of your accessories will extend their lifespan. Teka colanders, drain trays and vinyl-covered rinsing baskets should be hand washed, rinsed thoroughly and hand dried. Wooden chopping boards should never be soaked in water – rinse after each use and dry thoroughly.

Pop-up basket strainer

Teka top sinks are known around the world for their variety of accessories. Aesthetically pleasing and, more importantly still, they enhance sink functionality for the user. One such feature is the pop-up basket strainer, a practical accessory which can be opened and closed to fill and empty the bowl without direct contact with its contents (hot water, detergent...).

Stainless steel basket strainer

Most of our sinks incorporate 3 ½ basket strainers.

The basket traps the food particles left from washing up, or from cleaning vegetables or fruits, so they do not enter the sewage system. It can also be easily removed for cleaning. Teka has not neglected the appearance of this accessory, incorporating unique design features like three stamped logos.

Under-protection for stainless steel models

There are several systems available but the most common are sound-absorbing pads and undercoating. The main advantages of this special feature are that it absorbs sound, protects against condensation build-up inside kitchen furniture and helps to maintain sink water temperature. Most Teka sinks offer sound-absorbing pads as standard.

Teka overflow cover

The difference is in the small elements

When it seems that we cannot go further into creating a more depurated product, there is always a brilliant idea that arrives thanks to the effort and spirit we put into every single detail, into every single idea. The Teka overflow cover is made of AISI 304 stainless steel and includes the embossed Teka logo to make the undermount sinks a full Teka experience.

An overflow in the drainer

Design to the last detail

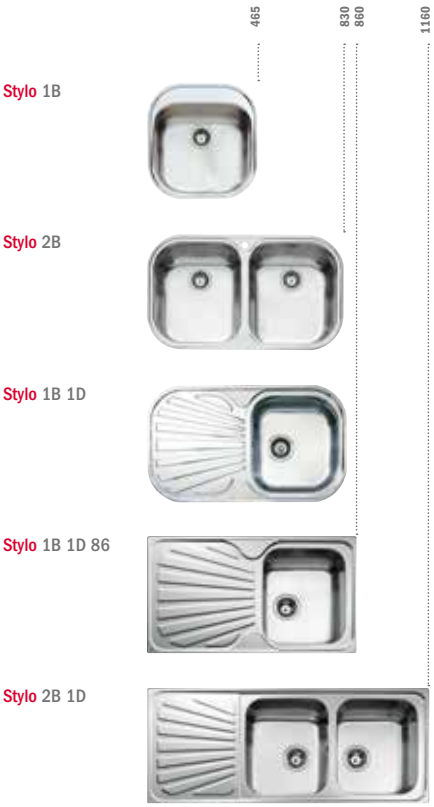
There are many decisions to be made when choosing a sink. Some of them are taken at immediately, such as size, configuration, bowl depth and others, but other small choices can add personality and functionality to a sink. The overflow is usually placed at the top of the bowl.

Overflow drainer

At Teka we have developed the overflow drainer (OD) in some models. With importance from an aesthetic perspective, it is a possibility worth exploring.

Stylo

Style is the highest expression of beauty



Beauty is defined as the harmony of form. And the form of the Stylo range of sinks combines harmony with design neutrality.

The Stylo series comprises three models which are adaptable to any space and to the strictest performance requirements.

Stand-out features include the fine texture of its finish and the innovative design of the draining board.

The Stylo series by Teka adds more style to your kitchen.

Delivery information: Carton box (0.140 m³ - 7.920 kg)

Packaging options: Making sure the sinks get home spotless

Which of the four options is the right for you?

Individual cardboard box

Teka sinks are usually presented in individual cardboard boxes. All boxes are stamped with the Teka logo and a sticker showing the name of the product and the code number. Inside the box, the sink and accessories, such as basket drainer, fixing clips and sealing strip for its installation, are included.

This packaging system is highly recommended for individual sales.

Five cardboard boxes

Carton box packs include five sinks and their accessories, basket drainers, fixing clips and sealing strip. This packaging system is especially designed for large quantities, and the accessories are included in the packaging.

Carboard protection

It is a comfortable and secure way of packing the sinks for sale in big stores. The accessories are sold separately. Although the sink is not inside a cardboard box, the protection around the sink perimeter is sufficient.

Five pieces bundle

Conceived especially for sinks that have a long distance to travel for delivery and when saving space is essential, this method of packaging makes the loading of goods easier and provides more space. The sinks are covered in a plastic bag and the corners are also protected with cardboard. The sink accessories are sold separately.

Intricate strokes, fancy lines and the most perfect balance between shapes and volume. With these exceptional features, Teka introduces this brand new sink line: the Universo series.

A sink full of qualities, where symmetry and balance come together in perfect harmony. Follow its path through the shapes like a flowing drop of water.

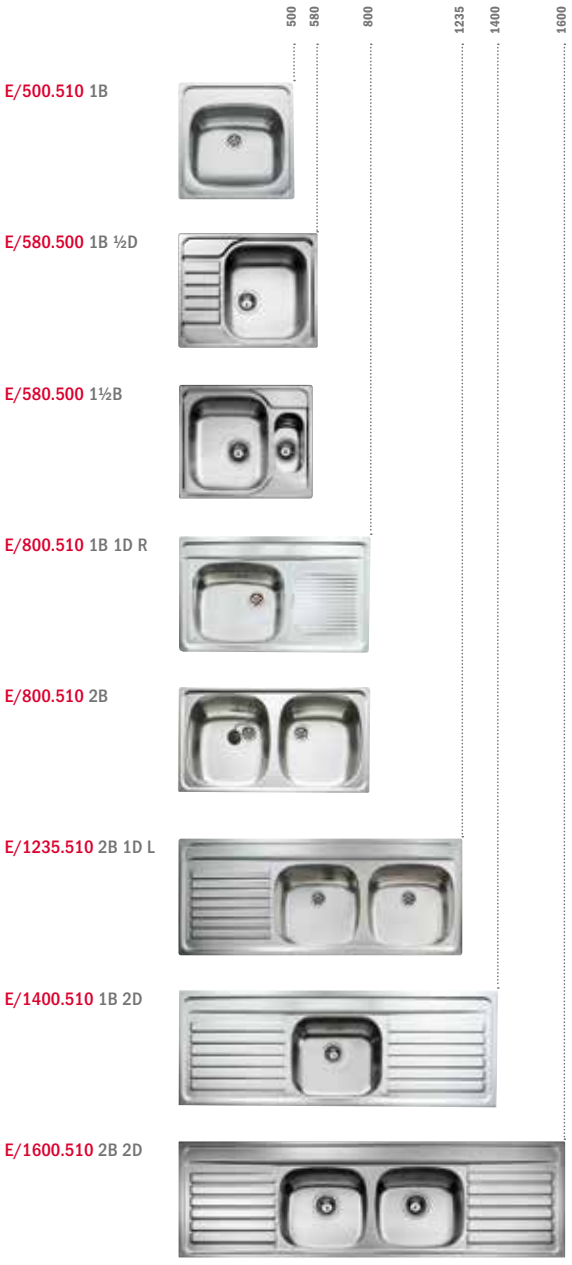
Universal

As versatile as its name suggests



For all existing measures see the following pages.

Universal because it can meet the needs of any user. Its quality and design augur a long and bright future for the most versatile of all Teka inset sink ranges.

The options on offer range from the standard single bowl sink up to king-size units equipped with 2 bowls and 2 drainers.

Universal, the safe bet.

D-bowl

Shape up your kitchen

The D-bowl series takes its name from the shape of the bowl. The D-shaped sink creates a stylish space and gives a warm touch to modern kitchens. The bowl, which has superb depth, is the solution for handling oversized food or kitchen items in the sink.

Why settle for one bowl when you can have two?

It is as simple as that. Two bowls offer more versatility; while one bowl is being used for cleaning vegetables or any other cooking duty, the other one remains untouched, ready to receive used kitchen crockery.

Get extra space with the double bowl series

A wise choice

Choosing a sinks is a much more complicated process than it seems at first glance.

Stainless steel or granite; one, two or even one and a half bowls, etc. Although it might seem an easy decision, it is not that simple. Many factors need to be taken into account. A basic aspect is the installation.

The undermount installation system is gaining supporters as it shows its ample ability to integrate sinks into the kitchen as no other installation system can. Moreover, being mounted under the countertop enhances the hygienic conditions of the kitchen and the usability of the countertop. And if undermounted sinks are a wise bet, two bowls is the perfect partner for this style. In single bowl sinks, the working space is filled quickly with dishes and other kitchen items. On the other hand, two bowls assure one bowl for storage and another as a work station for cleaning, peeling and preparing delicious meals.

Radea undermount

At the end of every straight line, there is a turn

A world without curves would simply not be the same. The curve changes our direction, it offers freedom, an escape from monotony, and it breaks the rigid rules that govern straight lines.

But straight lines are necessary as well. They offer security and confidence. We may like straight lines... but we need curves. That's why they're so important.

Because they are an alternative.

R15 & R10 & RØ

One more step

The R15 & R10 & RØ series maintains sink cleanliness as a key issue with the constant radius featured in all unions.

Another advantage of this series is the embossed cross in the bowl, which makes water drainage easier while providing a distinctive look.

Its appearance is enhanced thanks to the high-polish stainless steel.

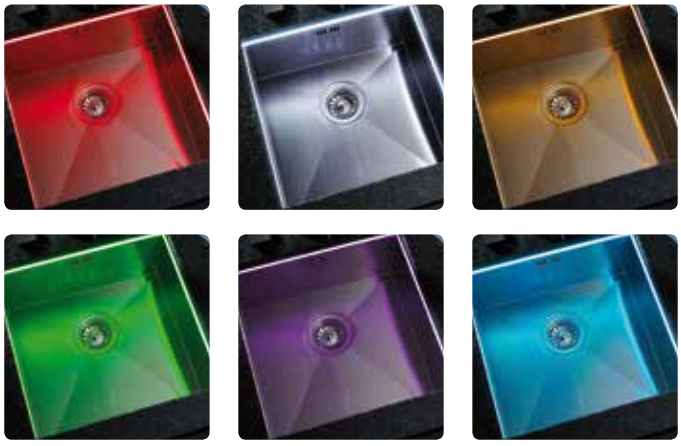
The difference is in the colours

Choose between six amazing LED colours for your sink

The Teka LED system available for most of the Linea and Radea undermount sinks will change the mood in your kitchen.

This innovative illumination system is set in an acrylic glass frame that incorporates an LED system inside. Operated via remote control, the frame is illuminated and the colour ranges through the whole chromatic spectrum thanks to the selectable intensity and basic colour combinations.

This surprising effect becomes even more intense when the colour is reflected off the bowls and the stainless steel panels.



The installation of this device is very easy. The frame must be firmly placed between the rim of the bowl and the worktop and connected using the provided electrical pack. It's recommended to respect a minimum distance of 25 mm from the niche hole to the tap hole.

LED system integrated in a acrylic frame

Remote control and connecting device

Plug for up to 3 frames

Expression & Frame

Above the standard

Undermount sinks are now common and highly regarded in kitchen planning. The high performance of this installation system has plenty of advantages, but in some instances the design element is missing.

Expression and Frame undermount bowls provide a design boost, thanks to the multi-panel engineered bowl and the combination of 25 and 15 mm radius in the bowl.

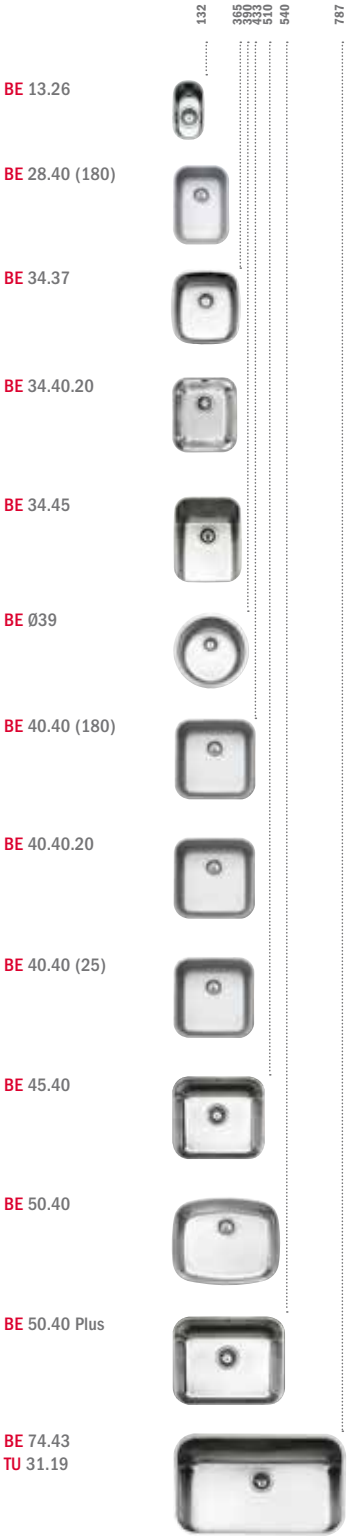
Single bowl

Seeking excellence



For all existing measures see the following pages.

One bowl, two bowls; stainless steel or composite, etc. There are as many combinations of materials, sizes, bowl-depth and so on as your imagination can come up with. So lay back, take your time and think of as many equations as you wish until you stumble across the perfect one.

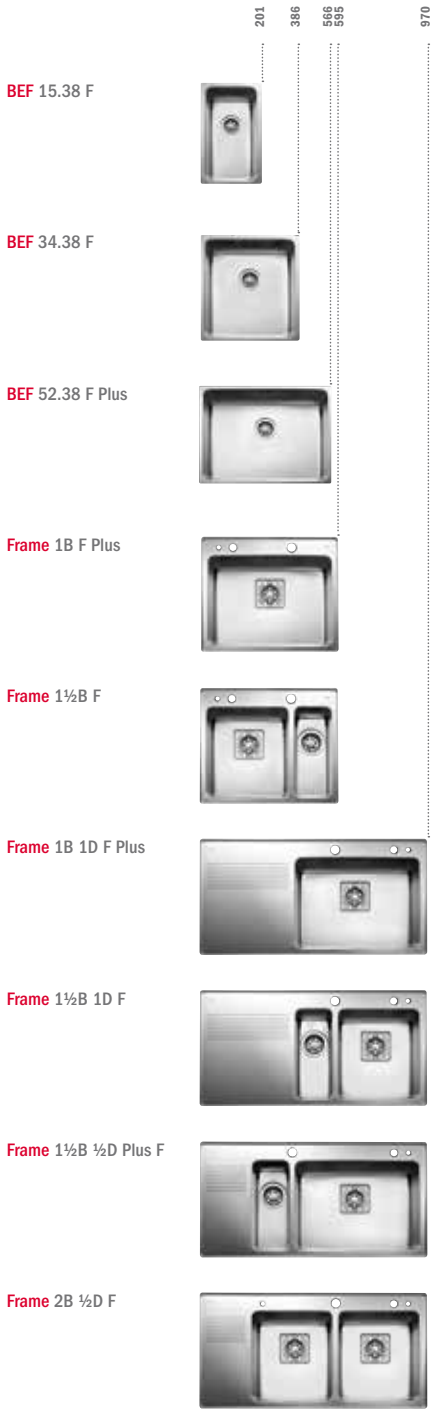
Integrated

Frame integrated

Total harmony



Frame is an entirely new generation of kitchen sinks.

Frame is a timeless design which emphasizes form and function rather than simply a dazzling exterior.

Designed and engineered with the customer's needs in mind, the Frame series of innovative kitchen sinks bring both practicality and beauty into the kitchen. Most common bowl configurations and all installation systems are available under the same constructive platform.

All you need in a single box

The first all-in-one sink

The Teka Top edge offers a new concept design for the Radea and Linea inset sinks. The sink edge is totally flat to accommodate the sink into the niche for integrated installation. In addition, the external rim and the brush polished treatment of the edge is so well engineered that it also looks great when inset installed.

Similar to other popular designs in cooking worktops, the Teka Top stainless steel edge gives an extra advantage to this intensive-use wash area in the kitchen.

The Teka Top adds a new and stylish possibility to the installation systems available for Teka sinks; i.e. the standard inset, the undermount, the integrated and lay-on systems.

Teka Top flat edge in the Radea and Linea models

This is the perfect solution to install the sink as top-mounted, as the visual effect in the countertop is similar to the integrated installation.

* For optimal integrated installation, ask for the electronic cutting template (dxf file).

Linea integrated

The summit of minimalism

The Linea series was born as undermounted products. Years have proven this decision to be the right one. The elegance of the undermounted design has never been discussed. However, there is a technique that makes straight lines and hard angles more prominent and that is integrated installation. The sink rim edge over the countertop reinforces the Cartesian perception of the sink.

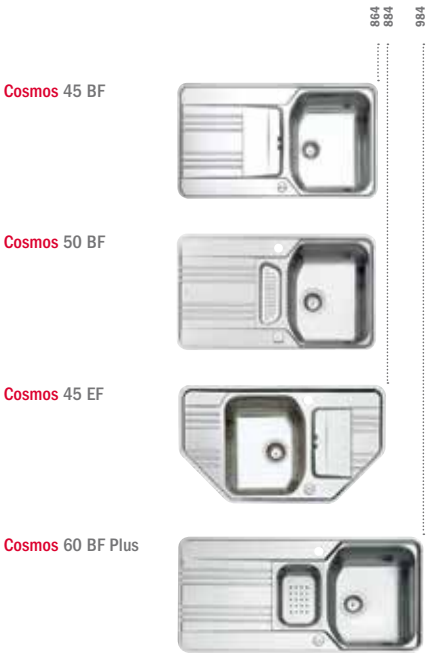
Cosmos integrated

Huge possibilities. As the name suggests



When a range becomes a classic like the Cosmos, we feel the necessity to expand its virtues to other installation systems. As is known in the industry, the integrated installation system is one of the most perfect ways to place a sink in your kitchen. Combining a great sink and an advanced installation, the integrated Cosmos achieves a high level of performance.

Teka
KÜCHENTECHNIK

Compact units

A great combination

These compact units encompass three sections (cooking, cleaning and working areas) which can be customized.

The compact units are manufactured in accordance with the highest Teka quality standards. When fitted in a kitchenette, other Teka appliances can easily be fitted to create a small Teka concept corner.

Tekaway

All in one

Nowadays, we tend to lo look for global solutions, but rather for the faster, easier and more economical option. These are the advantages we look for and we are pleased to discover them. Aware of this trend, we have come up with the Tekaway.

A bundle composed by sink, tap and accessories such as soap dispensers, colanders, siphons, etc. An all-in-one pack that will make customer's life easier.

This is what we are all looking for.

Taps

Taps

The perfect partner

Sinks can be described using an endless list of adjectives. They can be tough, elegant, powerful, etc. But they are nothing without their counterpart: the tap. From professional to economical ranges, Teka manufactures taps created with much imagination and designed to last. Time to enjoy your time withh the perfect pair.
