ELLECI Catalogue 2014/15

ELLECI Catalogue 2014/15

100% Antibacterial protection - pure glass micro spherical sections - Hydrophobic: it does not absorb water
Lipophobic: it does not absorb greases - Extremely smooth and sturdy surface - Whitening and thermal shocks resistance

* Until stock lasts

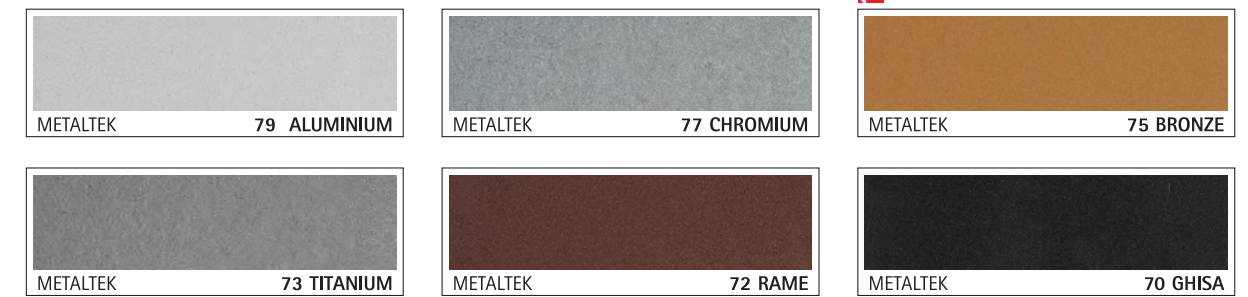

Antibacterial protection - Natural Granite - Sturdiness and highest temperatures resistance
Thermal shocks resistance - Violent impacts and stains resistance

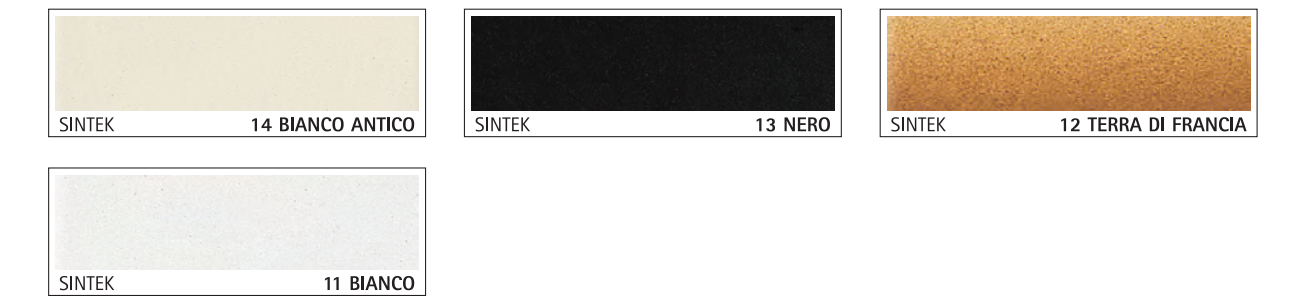

* Until stock lasts

Antibacterial protection - Natural Granite with metallic effect - Bright and brilliant finishing
Thermal shocks resistance - Violent impacts and stains resistance

A composite mixture made up of modified acrylic resin and silanated micronized quartz.
Silane is a binding element between resin and quartz aimed to guarantee components high adhesion.
The mixture is coloured in the mass with special colorants.

The Company The Know-How

For over **20 years** **Elleci** has been committed to achieve, what has always been considered the technological expression and the key point between past and future: **INNOVATION**. Thanks to the dedication to fulfil high quality and of authentic character projects, Elleci has turned to be nowadays “**Washing area expert with great attention to the colour matching in the kitchen environment**”.

Team Working

Elleci adopts the **TQM** (Total Quality Management), an organizational model based on the involvement of the whole company to reach the goal”.

The whole company structure is managed in order to overachieve in all those features of products and services important for the customer. One of the main targets of the company vision are its workers.

Management has always aimed to transfer them the vision, trying to let them share and accept those values that the vision requires and consequently each team member identifies himself and appreciates his role in the company.

In this way, over the years, everyone has been able to improve their competence, they have been encouraged to accept their responsibility and to participate to the company emotional intelligence creation.

Total Quality Management

*This important award has been conferred to the **DOGMA 100** and **SIREX** Electrosinks thanks to their unique and innovative features in terms of design and functionality.*

Our Team of engineers, chemists, researchers and designers analyses and test every single stage of production up to the finished product.

- Internal planning, construction and design.
- Use of high quality natural material.
- Use of italian semi-finished products and GPS moulding system Elleci patented.
- Elleci Quality Control
- Elleci Packaging

Certifications

100% Elleci certified quality

100% Made in Italy Certification

This certificate states that Elleci composite sinks are:

- manufactured in Italy;
- performed with Italian semi-finished products;
- realized with high quality and first choice natural materials;
- realized with Elleci exclusive design and planning;
- realized adopting typically Italian craft made working and traditional processes.

Elleci contributes to the sustainable production of street draining asphalts of new conception through the recycling of all the discarded sinks.

All the discarded materials deriving from Elleci industrial production (polystyrene, cartons, iron, sink discard, and so on) are totally collected in order to be used for the recycled materials production.

Material and energy recycling from civil and industrial wastes in the building industry is an optimal alternative for managing wastes and a safe solution for the collectivity and the environment. This system allows to save natural resources (non-renewable) and collect wastes in controlled conditions.

Elleci Green Green sink for Eco-asphalt production

Green products
respecting
human kind and
the planet that
hosts us!

FSC FSC Certifications

The FSC brand identifies those products coming from correctly and responsibly managed woods according to strict and rigorous environmental, social and economical standards. Woods supply us with clean water; fresh air and they help the fight against global heating.

If responsibly managed, woods, give great support to local communities and to the whole world. Unfortunately in some countries 80% of the woods are illegally cut.

SINCERT

SISTEMA
DI GESTIONE
CERTIFICATO
REG. N. 1543
UNI EN ISO 14001:2004

ISO 14001

Certification of the environmental system management. It certifies that Elleci works on the territory in an eco-friendly way, with great respect of the environment and of the laws.

This certificate contributes to improve the relation with our planet, and cut down the costs thanks to waste and refuse reduction.

Family value

Elleci is able to offer a wide range of sinks to match with cooking hobs, hoods, ovens and mixers. Clean lines with extreme attention to details, the style of a complete range of products that furnish your kitchen setting in harmony.

Many possibilities to have a unique and exceptional kitchen. Shown below some collections to orient oneself in the choice of the matchable products in many hints and in combination both modern and classic.

4
5

Elleci Italian design products are: contemporary, surprising and innovative. Our suites are designed to fulfil your real, everyday needs in the kitchen.

1 Ovens

The new oven collection is designed to cook any recipe. Clear lines, handy to use, easy to install and provided with many cooking programs to choose.

2 Cooking Tops

Integrated into the design of the kitchen, our new hobs with crystal or enamelled steel aesthetic, perfectly match with the design of ovens, hoods, sinks and mixers.

3 Hoods

Very silent, efficient, powerful: cooking with our hoods becomes a pleasure, not only for the guests. A range of different shapes and solutions allow to customize the cooking area.

4 Sinks

Our sinks, in various materials and forms, offer models with big personality and stylistic value, that can enhance the work plan of your kitchen both alone or in combination with cooking appliances.

5 Mixers

A collection designed for lived in kitchens. Clean lines, practicality, durability and aesthetic impact, are the common denominators of a complete set of harmonious and functional solutions.

For this reason our sinks, mixers, cooking top, ovens and hoods are functional, and full of talent and passion.

A thought to the design and one to those who live it.

BUILT-IN

MAX 900
2 bowls electrosink
BUILT-IN

The exclusivity of our Electrosinks.

Curiosity drove us to bring the electronic into what traditionally is called sink. So a new product category was born, unique and functional in its kind. We call it: **Electrosink**.

WASHER 120

MAX 1000

MAX 900

28
29

The combination between water and electronic allows us to revolutionize the kitchen washing area giving a soul to the sink and getting it out of the inset bonds. The Electrosink becomes a new elegant furnishing component, integral part of the kitchen.

MISSION ELLECI

OUR MISSION IS TO REVOLUTIONIZE THE TRADITIONAL IMAGE OF THE KITCHEN SINK: ALL ALONG CONCEIVED LIKE A SIMPLE ACCESSORY, THE KITCHEN SINK CHANGES INTO A REAL AND INDEPENDENT FURNISHING ELEMENT, MARKED BY AN AUTHENTIC CHARACTER. THE EVOLUTION OF THE ELLECI DE LUXE PRODUCTS DOES NOT FOLLOW A TREND, BUT ATTENDS MAN AND HIS GESTURE IN HIS CREATIVITY.

Love for details, for finishes and quality of materials are the features which distinguish our products.

It means functionality, comfort, enhancing the qualities and characteristics of raw materials reaching maximum performance.

Innovation

It means technological research meeting the needs of product users.

WASTE OIL ASPIRATOR

Respect environment is a value through which we can improve our daily habits also in the kitchen. The comfortable oil aspirator, easily replaceable in the proper container, allows us to keep a suitable balance with nature. The collection of just 1 liter wasted oil, means the preservation of 10.000 square meters. Through the oil aspirator and a collecting tank placed underneath the sink, we can recover the exhausted oil so that it can easily disposed thanks to the simple operation of separate collection.

ULTRASOUND HYGIENIZATION

In these last years, hygienization used ultrasound system to get a safe cleaning until now reserved only for medical-surgical equipment. Ultrasound (high frequency vibrations) are able to produce pressure waves that continually generate microscopic balls which implode. The crash energy of these implosions improves the efficacy of this cleaning system since it can penetrate into little spaces or cavities of an object. Today, through detailed studies, it was possible to enlarge such use for all objects also in the kitchen field: in fact this process is able to ensure the complete elimination of bacterial microorganisms also on food, without the use of chemical detergents.

Ultrasound Hygienization: no detergent and running water needed; it is enough to dip the food or object to clean and activate the system for about 5 minutes. Ultrasound (high frequency vibrations) are able to ensure the complete elimination of bacterial organisms on any object or food (fruit, vegetables, bottles, glasses, rings, earrings).

nr. 5 drawers
180 litres
of usable space.

ACCESSORIES AREA

Practical soap dispenser, glasses drainer, food waste disposer or alternatively the glasswasher are only some of the available and customizable accessories in the washing block. Functionality and practicality in order to make easier the daily activities in the kitchen, reinventing the spaces.

FOOD WASTE DISPOSER

Essential appliance that frees us from organic waste. No bad smells anymore; waste reduction to be disposed. Practical conveyor funnel.

Alternatively to food waste disposer: GLASSWASHER.

Washer 120

2 bowls and cabinet electrosink
Dimension: **1200 x 730 mm**

Technical data

Electrical network connection: voltage 230 volts.

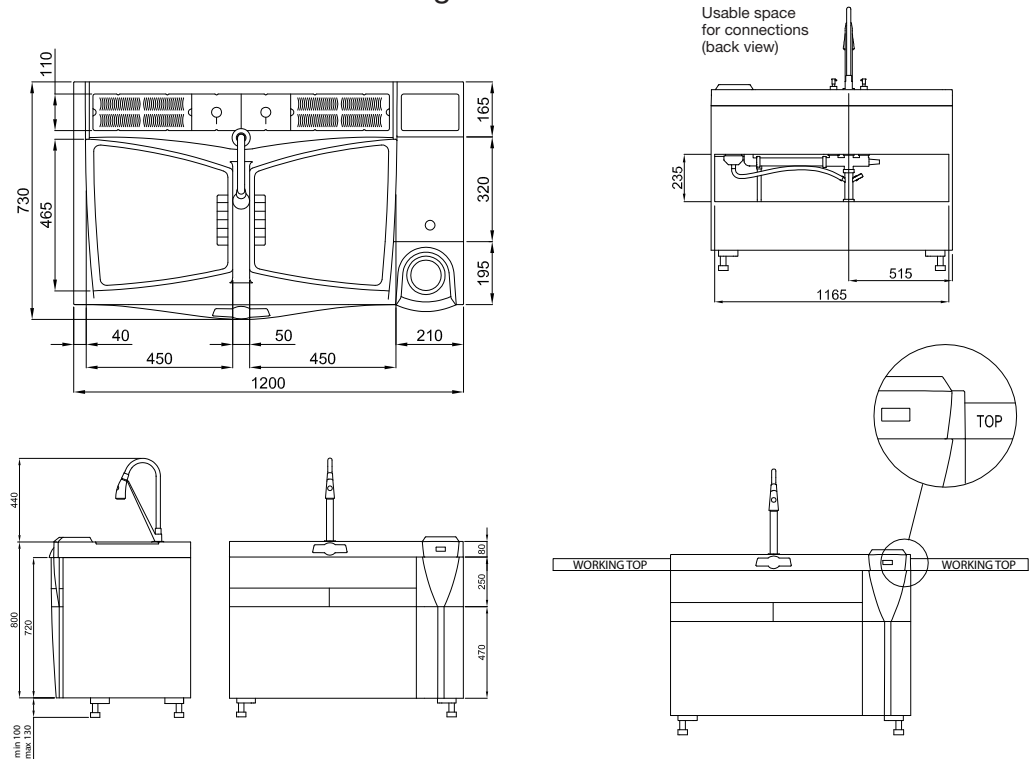

Maximum Absorbed Power

Washer 120 services: 130 W.
Ultrasound washing basin: 120 W.
Food waste disposer: 650 W.
Power supply services control device with security voltage at 24 volts.
Hydraulic connection: connection to the normal water consumption.

Connections:

Electrical: connecting wall socket.
Entering hydraulic (Hot/Cold water): normal flexible.
Exiting hydraulic (Drain): normal siphoning.
No adjustments and setting needed: self-adjustment machine.

Washer 120 Limited Edition: customized and hand made.

Marco Longo, the winner of “**YOUNG DESIGNERS AWARDS LAZIO**” competition proposed a collection composed by n.10 Washer 120 customizations, painting by hand the frontal panels in polyurethane, with different techniques (spray or aerograph). Ten proposals are divided in three categories: 3 “**Warm**”, 3 “**Cold**”, 3 “**Fresh**” and one “**Graffiti**”; realized with free hand spray.

YOUR OWN WASHER: We have to specify that this collection represents only a very little series of the possible customizations on the electrosink frontal panels. In fact, you can get the panels according to your own preferred theme, work of art, style or colour. Our young Street Artist **Marco Longo** will be at your disposal for “sketching” **YOUR OWN WASHER**.

Electrosinks like pictures, windows on a fairy-tale world: softness inscribed in a specified perimeter, which brings us to a contemporary pragmatism, to a new need for discipline. All is researched, but simplified. Few formalities, revaluation of manual working and a visionary interpretation of **Elleci** spirit. Escaping from inflation of digital techniques, the drawings on the 5 frontal panels **Washer 120 Limited Edition** are unpublished and handmade. Shapes linearity, geometric sense and primary solution return, confer lightness to the whole. Harmony is the balance among roundness, fantastic digressions, virtuosities and a strong essentiality sense. Thoroughness, optical and perceptual illusions, for a dense and rich whole, with touches of eccentricity.

Max 1000

2 bowls and cabinet electrosink

DOGMA

COLLECTION

Dogma 100 CROMO DESIGN
two bowl chromotherapeutic over-top electrosink

Dogma 100
two bowl electrosink over-top

Dogma 90
two bowl electrosink built-in

S.I.R. Compact Draining System

Innovative and patented Compact Draining System that allows the maximum optimization of the space underneath the electrosink, thanks to the limited 5 cm encumbrance. Better spaces exploitation and optimization under the electro sink. More bowl space available thanks to the particular lateral position of the SIR grid, which completely replaces the traditional and less functional waste.

60 litres/min.

No hole for the overflow: more beauty, safety and functionality.

Greater water down flow thanks to the lateral position of the grid.

Minimal composition, one element easy to clean. Thanks to a practical frontal panel it is possible to collect residual accidentally deposited within the SIR grid and make an extremely easy and precise periodical cleaning of the waste.

95% capacity of the space underneath the sink thanks to the optimization of the bowl bottom.

46
47

Despite having a generous 90 cm length, Dogma can be installed into a 90 cm base, using a 86 cm standard builtin sink inset hole.

Compact Draining System
Space under the sink: around 5 cm

Traditional Draining System
Space under the sink: around 30 cm

VS

Elleci electrosinks have a **TOTAL ANTIBACTERIAL PROTECTION**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled. Reliability and practicality become a certainty every day in the kitchen.

Planned by Italian creativity.

DOGMA
CROMO DESIGN

Design by:
Davide Stolfi & Defne Dilber
Dilber & Stolfi Architectural Studio
is an industrial designing laboratory
set up in Rome in 2006
by Davide Stolfi and Defne Dilber
after a long cooperation
into Massimiliano Fuksas
international studio.

Dogma Cromo Design is an innovative chromotherapy electrosink. It is able to create a customized coloured atmosphere choosing both intensity gradation and cyclicity.

Red: this colour symbolizes strength, healthy and vitality; it represents fire, joy and fest.

Blue: it is a calming and refreshing colour, it lets you forget all daily problems.

Yellow: it is associated to the left brain side and generally to the intellectual one, with stimulating and support effects in studying. It is considered as a protective and concrete colour.

Orange: it has a liberating action on physical and mental functions; it induces to serenity, enthusiasm, cheerfulness, love for life, optimism, feelings positivity.

Fuchsia: it is the colour of thought and mind. It encourages inspiration, it controls irritability, it eases meditations and it induces to spirituality.

In the last few years, chromotherapy had a remarkable development thanks to several scientific studies that show the influence of colours on nervous, immune and metabolic systems.

Colour therapy has natural effects on body and mind, it is able to stimulate the body and to ease some symptoms. In colour therapy each colour is associated to particular psychic and spiritual features.

Egyptians, Romans and Greeks practiced the light therapy (direct exposure to sunlight) for the cure of several and different illnesses.
In India the Ayurvedic medicine always kept in mind how colours affect the chakra, energy centres associated to main glands of our body.
Chinese people as well trusted in different shades action for their wellbeing.

Chromotherapy has ancient origins, since the traditional medical sciences always gave a great importance to the colours influence on man healthy and mood.

Among several programs you can select “**PURE WHITE LIGHT**”.
White: it is the color of hope and trust in the others.
It encourages purity and wish of change.

S.I.R. Compact Draining System

Innovative and patented compact space saving draining system that optimizes the space under the sink, due to the limited size of 5 cm. **Better exploitation and optimization of space under the sink.** Increased usable space inside the bowl because the grid, replacing the traditional waste, is laterally placed.

No hole for the overflow: more beauty with the same safety and functionality. **Greater water down flow because the grid,** replacing the traditional waste, is laterally placed.

Minimal composition, one element easy to clean. Thanks to a practical frontal panel it is possible to collect residual accidentally deposited within the **SIR** grid and make an extremely easy and precise periodical cleaning of the waste.

QUICKER AND EASIER INSTALLATION

Sirex Electrosink is supplied with premounted hooks and draining system (S.I.R.) already installed.

As a result, time saving and easier work for the installer.

95% capacity of the space underneath the sink thanks to the optimization of the bowl bottom.

Compact Draining System
Space under the sink: around 5 cm

Traditional Draining System
Space under the sink: around 30 cm

VS

ELECTRONIC OR MECHANICAL FUNCTIONING

Electronic: opening/closing activated by a button placed on the control panel. Equipped by a lithium backup battery, long lasting for a complete autonomy in case of absence of electricity.

Activating of mechanical system: popup lifting system with direct action and not rotating, much more efficient, practical and durable.

Elleci electrosinks have a **TOTAL ANTIBACTERIAL PROTECTION**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled. Reliability and practicality become a certainty every day in the kitchen.

Technical data

Electrical network connection:
voltage 230 volt.

Maximum Absorbed Power

Electronic S.I.R. management: 9 W.

S.C.T. management
(Chromotherapy System): 20W – 12W.

Hydraulic connection:
normal water consumption.

Connections:

Electrical: connecting wall socket.

Entering hydraulic (Hot/Cold):
normal flexible.

Exiting hydraulic (Drainer):
normal siphoning.

No adjustment and setting needed:
selfadjustment machine.

Heat stop board (H.S.B.): ELLECI PATENT

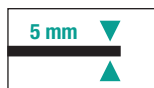

H.S.B. THE PATENTED ACCESSORY INCLUDED

The HEAT STOP BOARD is supplied as accessory included in SIREX kit. It can be comfortably used as chopping board or pan stand. The space created between the H.S.B. and the drainer allows to dissipate the accumulated heat from the stainless steel board without altering the sink surface material.

62
63

Up to date, the last limit of the composite sink has been the limited resistance to high temperatures. The resistance limit tends to remain at maximum at about 250° C.

However this limit is fairly restrictive, considering that a lot of pots and pans, coffee pots, teapots, etc. may exceed it, hence the need to develop a system that does not limit such use.

Thickness H.S.B.
AISI 316 stainless steel.

The **H.S.B.** is based on a **AISI 316** stainless steel plate application of a thickness of about **5 mm** inserted into a slot placed on the sink drainer centre, so that to make its use more practical furthermore to enable the steel plate to disperse the accumulated heat due to any contact with very hot objects, there are 4 spacer pins which create a gap between the steel plate and the composite material of the drainer surface. In this way, the accumulated heat from the plate is easily dissipated into the air. The spacers facilitate the placement of the plate on the sink keeping it blocked into its position.

In order to clean it, the removal is extremely simple and fast. Thanks to this innovation, the composite sink surpasses its last limit, while improving its visual impact due to the combination of two different materials.

Materials

For over 20 years **Elleci** has committed itself to improve its Quality, creating innovative materials for its sinks production, on the ground of eco-sustainability principles. This enables **Elleci** to put into the market high quality products so to fulfil the customers' expectations.

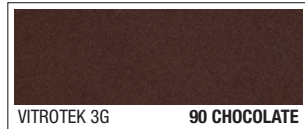

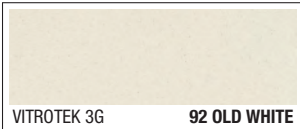

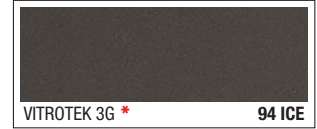

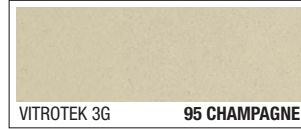

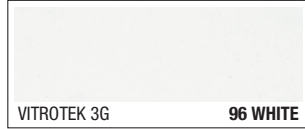

Our materials **Value** is the result of unending research aimed to pursue the excellence. Nowadays each upgrading has to consider the environmental respect and **Elleci** consider this aspect as a responsibility which affects every productive steps.

G.P.S. System

G.P.S. System represents today the best moulding technology expression of thermosetting composite materials in the kitchen sinks field.

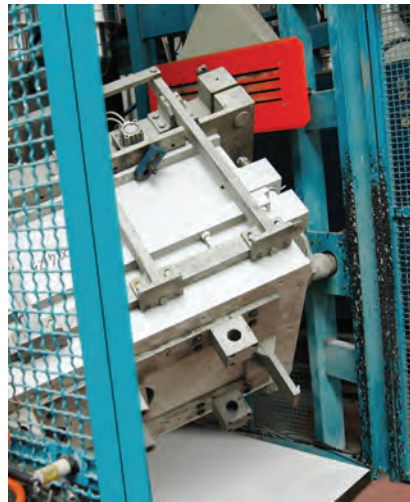

Cycle time

Chemical and physical tests show that the cycle time reduction in the manufacturing process makes the product fragile, weakening the chemical bonds of its components.

Elleci now applies in all its manufacturing processes a correct balance between productive optimization and undisputed quality of the product. Durable sinks!

Manufactured with Elleci technological system, G.P.S., sinks in Granitek, Metaltek and Vitrotek 3G are featured by an even distribution of components throughout the sink mass.

Homogeneous particles distribution of the mass sink, both on the back and front side thanks to G.P.S. production system.

72
73

Plus of G.P.S. system:

- Improved impact resistance (+30%).
- Improved thermal shock resistance (+100%).
- Over 7000 cycles hot (above 90°C) and cold water (15°C), **20 years** of daily use.
- Better resistance to high temperatures (+30%).
- Improved appearance of the sink.

G.P.S. System:

G.P.S. system is a machines whole that allows to mould a composite material which is made up of acrylic resin filled with quartz particles of different sizes, according to the final product to be realized.

The heart of equipment is the moulding press, which represents a technologies combination that allow to get a product by mechanical properties superior to any other article of the same category.

Thanks to the fact that the press manages a dynamic mould, the machine can realize a product featured by a homogeneous distribution of the compound, even if its components have different specific weights.

Vitrotek 3G is an exclusive material composed by resin and pure glass particles. As known, the glass has specific qualities that make it an ideal element for many uses, especially in the kitchen environment. Equally hygienic are its properties. It is completely anallergic and antibacterial, resistant, hygienic, antistatic and stable in colour.

Vitrotek 3G is a material which “Sapienza” University in Rome certifies as 100% antibacterial by nature. Actually its hygiene is guaranteed from material structure and not from simple additives or surface treatments.

Compact: surface density optimized thanks to the micro spherical glass section. Easy to clean: doubled flow of liquids on its surface compared to traditional materials. Halved water absorption: using glass microspheres and hydrophobic “special resin” the water absorption is improved: 40% less than the best materials present on the market today. Consequently, bleaching resistance and surface porosity are further enhanced.

Antibacterial: extremely smooth surface. **Nonporous, hydrophobic and lipophobic.** Impossible the bacteria establishment.

Improved hardness of the surface maintained unchanged: initial unchanged qualities thanks to the extremely compact surface.

100% pure glass microspheres.

100% antibacterial protection.

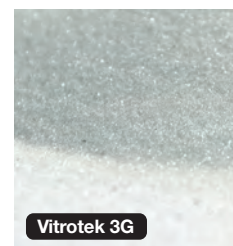

Hydrophobic: it repulses water.

Lipophobic: it repulses greases.

Compact: extremely smooth and hard surface.

Improved resistance to thermal shocks.

Doubled flow of liquids.

METALTEK
GRANITE METALLIC EFFECT

10 Garantito
Warranty
Anni • Years

It attracts the eye, inviting to the touch. Aesthetical impact, adaptability to steel, Granitek functionality and practicality.

The chemical composition is made up natural granite, acrylic resin and, like all the sinks manufactured with the technological leadership G.P.S. system, has an even mass resulting in high resistance to stains, impact and temperature changes.

The uniqueness of this product is that have been added the metal particles, making the product with a brilliant and shining finish. The target is to obtain special “metallic effects”.

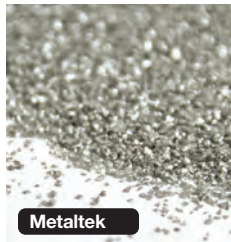

The different finishes allow a perfect match between the sink and the other stainless steel components in the kitchen.

ANTIBACTERIAL PROTECTION

The **Metaltek** material has an antibacterial protection, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled. The mass is in fact enriched with silver ions that inhibit the establishment and growth of bacteria.

74
75

Granitek is given by the union of natural granite and acrylic resin and has the best quality: high resistance of granite to high temperatures, to impacts and to the most violent shocks. Appearance like a natural stone.

Ceramization: is a specific colouring process of the granite particle. The painting is not only on the surface but in the entire mass of the particle through a firing process at 700°C which allows to penetrate into the particle nucleus.

ELLECI CERAMIZED PARTICLE

NOT CERAMIZED PARTICLE

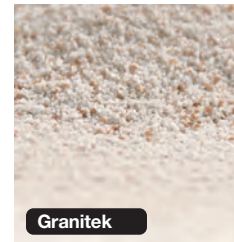

The result is a significant improvement in resistance to the discoloration.

The coloured granite selection, variation and shades combination determine the finished product colour.

ANTIBACTERIAL PROTECTION

The **Granitek** material has an antibacterial protection, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled. The mass is in fact enriched with silver ions that inhibit the establishment and growth of bacteria.

VALUE

COLLECTION

Value 130 INSET
one-bowl sink

Value 130 UNDERMOUNT
one-bowl sink

Arranging, hiding and modelling the Water Zone have never been so simple and pleasant.

An essential project inspired by an unique, timeless concept.

Unique products featured by a marked innovative character which blends the extreme functionality with the ability to “model itself” to the user requirements up to completely disappear.

FUNCTIONALITY

Guides placed along the whole sink which allow to integrate a lot of accessories.

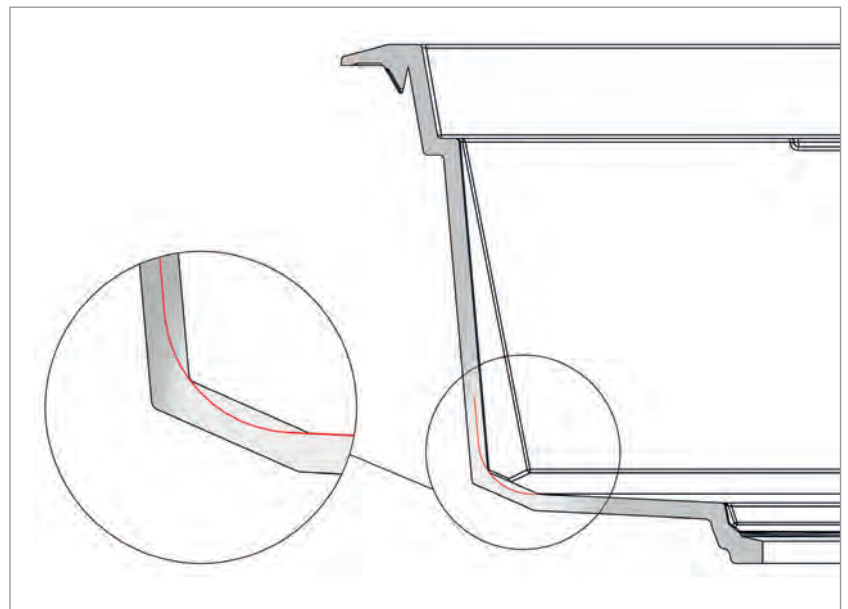

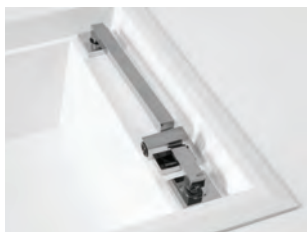

Prisma-Clean:
prismatic edge sinks.

II PRISMA-CLEAN: prismatic radius born by softness of a curve.

Prismatic section corners tend to blend those particular points difficult to reach and to clean together with a soft shape, even if marking the sink by straight and sharp lines. The result is a look by an extraordinary visual impact and marked innovative side.

86
87

EXCLUSIVE AND COORDINATED DESIGN

In itself design contributes to make this product userfriendly. Up to now the modern shapes have been characterized by a clean design and minimal radius while those classical by wide radius. Value Collection is featured by an exclusive design, modern style and in the meanwhile by an extremely cleaning easiness thanks to the ample radius.

ACCESSORIES AREA

Exclusive suitable components (overflow, pop-up waste, staves and e-cover). Technological components. Modular accessories: with sink they create a WATERZONE which allows to separate and optimize the spaces according to the operations connected to water (PREPARING, CLEANING, COOKING). Exclusive accessories in terms of shapes and materials.

COORDINATED DESIGN

Multifunctional areas from both sides. Preholed area which allows to install a large accessories range: pop-up waste, pullout shower mixer, compact soap dispenser and foldaway modular staves.

Elleci sinks have a **TOTAL ANTIBACTERIAL PROTECTION**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled. Reliability and practicality become a certainty every day in the kitchen.

inset

undermount

Each detail and accessory have been designed for harmoniously living in a multifunctional environment.

FOLDAWAY OVERFLOW realized in the same material.

FOLDWAY WASTE

Waste and overflow are for the first time integrated in the Water Zone thanks to the cover manufactured in the same material.

- 1 ONE - MATERIAL
- 2 PRISMATIC EDGES
- 3 FOLDAWAY MIXER FOR UNDER WINDOW INSTALLATION

FUSION

Suitably researched foldaway mixers featured by a clean and practical design. Foldaway with E-COVER.

Under-window sink

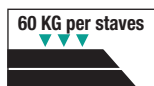

Pull-out shower with onboard control, an even more professional and practical use.

Close and replace

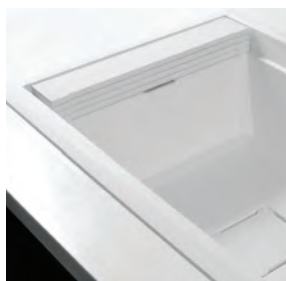

Multifunctional foldaway top. Guides placed along the whole sink which allow to integrate a lot of accessories.

STAVES IN VITROTEK 3G, METALTEK E GRANITEK

Innovative staves system which constitutes a multifunctional, modular working top and for the first time manufactured with the same material which the sink is made of. (supported weight: 60 kg per staves).

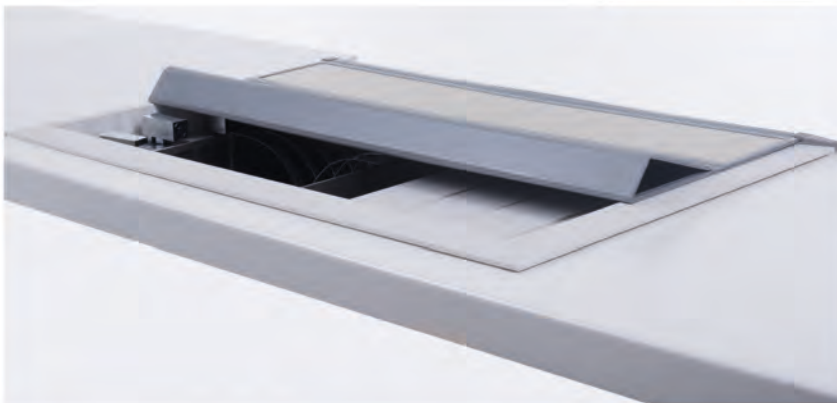

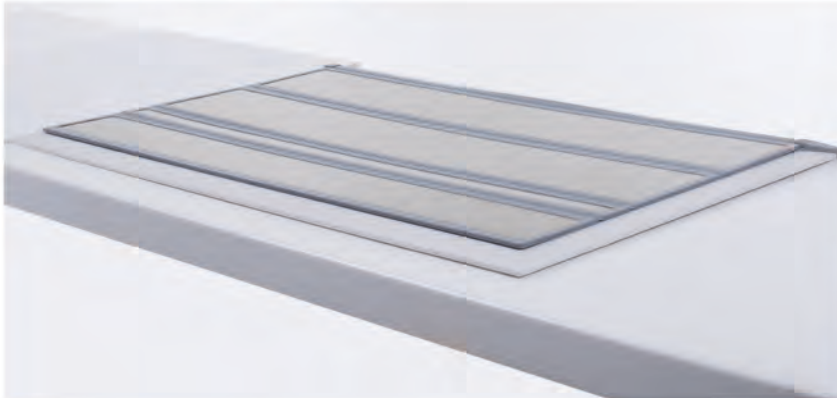

New Version

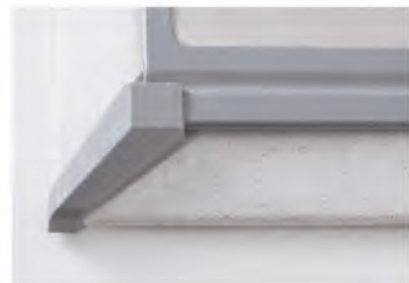

Manufactured with 2 mm thick AISI 304 stainless steel plates and with food-grade silicone, resistant to high temperatures (up to 180° C).

E-Cover an innovative accessory.

- Core in AISI stainless steel (2 mm thickness)
- Covered with heat-resistant food silicone
- Simple removal for cleaning
- When opened it becomes a functional and safe back support that avoids water leakage
- Folding points in high-resistant food silicone guarantee an intensive use of this product for thousands of cycles.

When closed it becomes a totally usable working top, resistant up to 180 °C

Comfortable fixing system on the sink

*Available only on standard models (not undermounted)

Quadra Standard: minimal design and contemporary style.

A minimal sinks collection which, due to its simplicity, succeeds to highlight its moderns and clean shapes. Each model can be equipped with many accessories and the many colours.

106
107

Inset:

The rim of the sink after installation appears on the worktop.

New accessory: waste cover.

- SPACE-SAVING SIPHON
- OVERFLOW ELLECI
- PRE-MOUNTED HOOKS

Elleci sinks have a **TOTAL ANTIBACTERIAL PROTECTION**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled. Reliability and practicality become a certainty every day in the kitchen.

Prisma-Clean prismatic edges sinks.

An essential project inspired by an unique, timeless concept.

Unique products featured by a marked innovative character which blends the extreme functionality with the ability to “model itself” to the user requirements up to completely disappear.

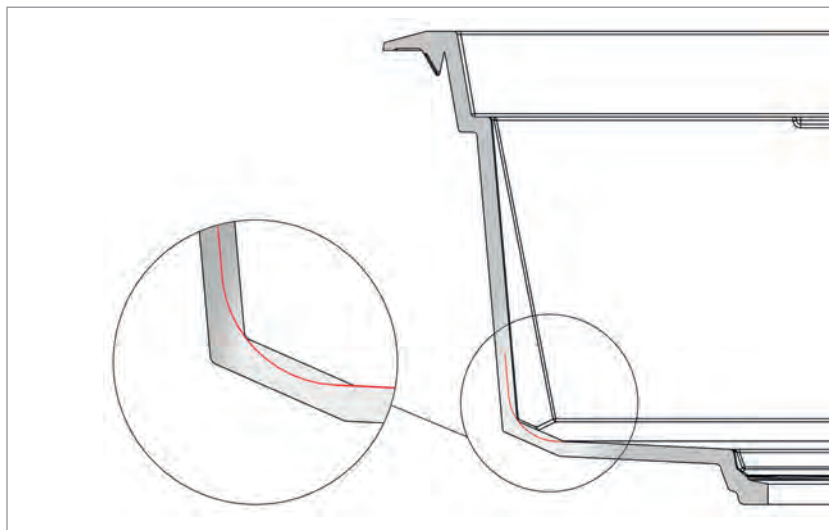

Prisma-Clean:
prismatic
edge sinks.

*II PRISMA-CLEAN:
prismatic radius born
by softness of a curve.
Prismatic section corners tend
to blend those particular points
difficult to reach and to clean
together with a soft shape,
even if marking the sink by
straight and sharp lines.
The result is a look by an
extraordinary visual impact
and marked innovative side.*

PRISMA-CLEAN: prismatic edge sinks.

The PrismaClean system, which exploits the polyhedric nature of this particular geometry, replaces the classic internal radius, particularly reduced on modern lines products, with prismatic lines which soften the inner area of the bowl and make the cleaning easier. An extremely modern character with an exclusive visual impact.

Inset:
The rim of the sink after installation
appears on the worktop.

New accessory: waste cover.

- SPACE-SAVING SIPHON
- OVERFLOW ELLECI
- PRE-MOUNTED HOOKS

Elleci sinks have a **TOTAL ANTIBACTERIAL PROTECTION**, which has an adequate antibacterial coverage of the mass. In this way the bacterial organisms are repelled. Reliability and practicality become a certainty every day in the kitchen.

River CORNER

two-bowl sink with draining area

A versatile collection suitable for most different requirements, always offering the best functionality.

Spessore 6/10

River Collection, built-in, stainless steel AISI 304 18/10.

182
183

Satin finish: matt but shining, the **satin steel** for years keeps unaltered its elegance values, hygiene and resistance to daily wear and tear.

Antiscratch finish: surface is worked in a particular texture conferring to it a high abrasions resistance.

Production of “authentic” steel sinks.

Our sinks are made of genuine stainless steel **18/10**: ideal ratio between **chrome** and **nickel**.

Chrome makes the steel hard, it stands wear and tear and the nickel increases the impacts resistance.

New accessory: waste cover.

Inset:

The rim of the sink after installation appears on the worktop.

Depth bowl:

190 - 195 mm.

Square Collection

Square 720 2V
two-bowl sink

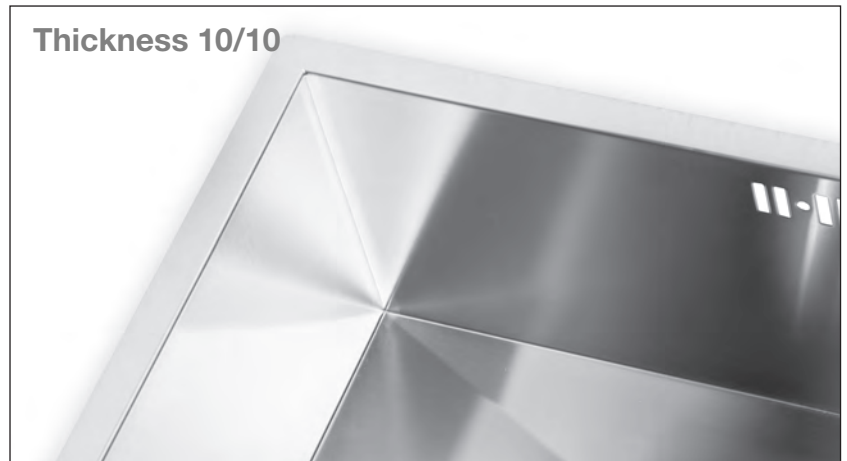

Square 500
one-bowl sink

Square 340
one-bowl sink

Accessory:
square waste

Simple but precious, these square bowls are the perfect product for whom paying attention to details and design.

Square Collection: inset and undermounted, stainless steel AISI 304 18/10.

Satin finish: matt but shining, the **satin steel** for years keeps unaltered its elegance values, hygiene and resistance to daily wear and tear.

Production of “authentic” steel sinks.

Our sinks are made of genuine stainless steel **18/10**: ideal ratio between **chrome** and **nickel**.

Chrome makes the steel hard, it stands wear and tear and the nickel increases the impacts resistance.

New accessory: waste cover.

Undermount:

The rim of the sink appears underneath the worktop.

Inset:

The rim of the sink after installation appears on the worktop.

Depth bowl:

210 mm.

Mixers Collections

100% Made in Italy

All Elleci mixers are Made in Italy. Our manufacturing chain guarantees high quality, prestige, reliability, origin and, above all, Italian design.

ELECTRONIC AND MANUAL CONTROL ON EVERY SINGLE PIECE

Quality

Our mixers components control is done by the accuracy of numerical control machines and their assembly is electronically monitored. Before being packaged, our mixers are one by one manually cleaned; this operation allows, both a visual inspection of chroming or painting quality and the general aspect of the piece.

MATERIALS FOR A GUARANTEED TOTAL HYGIENE

Hygiene

All mixers are manufactured of materials in conformity with National and International rules referring them, which get in contact with drinking water, which guarantee a continuing hygiene during the mixer opening/closing, such as like product certifications: **DVGW KTW** Class A in Germany, the Dutch **KIWA**, the English **WRAS**, the Swiss **SVGW**, the French **ACS**, **NSF** in the United States and the Australian **SAI** Global.

10-YEAR USAGE FOR BAKED CLAY CARTIDGES AND DISCS

Saving

Our products come from experience and continuous technological updating, which always are more careful on energetic saving and on ecological demands.

All the mixers, equipped by ceramic disc cartridges, are guaranteed for 70.000 opening/closing, in other words, 10 year use by a four people family. Therefore, they are designed to last in time.

Elleci mixing cartridges meet the requirements of the most important International standards, such as EN, NF, ASME, ASSE, CSTB, AS/NZS 3718. Cartridges are equipped by a double control device for regulating flow and temperature, enabling the consumer to adjust flow and temperature parameters according to his needs in order to save resources and energy.

Features and functions:

- Pull-out showers
- Water filtering
- Material and painting
- Vertical/horizontal adjustment
- Retractability for under-window installation

Wide available choice

ELLECI mixers strong point is the wide range of offered products, extended from different points of view such as types, finishes, materials, colours and prices.

Green

increased attention to ecological aspects.

Professional

functional use of technology.

Design

Made in Italy features.

Classic

tradition and country style.

Suite Vitrotek, Metaltek, Granitek and Stainless Steel combination.

Who loves harmony and wishes keep it in every detail, creating a one and only kitchenplace, our mixers' models offer the widest range of colours to be combined to our sinks, cooking tops, ovens and hoods.

Increased attention to ecological aspects.

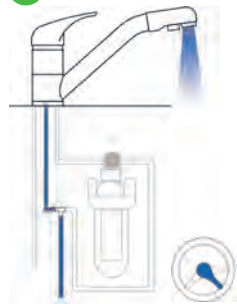

Why buying drinking water? Just think of necessary energy needed to produce, disinfect and fill bottles and then to transport and stock them. An energy loss that, drop by drop, affects the final price. Unique solution: **domestic water depuration.**

SAFE RE-USING OF SUPPLIED WATER

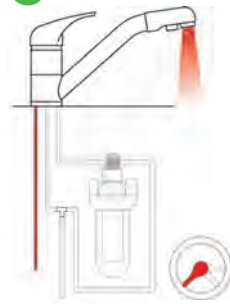

Our Green mixers supply warm/cold water like a standard mixer and furthermore they supply drinking water through a separated distribution to guarantee a perfect hygiene.

Healthy and safe drinking water directly from your domestic mixer.

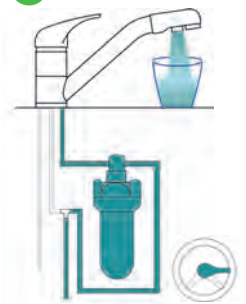

1 Cold water

2 Hot water

3 Purified water

236
237

MORE TASTE

The suggested filtering kit is able to purify drinking water, eliminating impurities, microorganisms, chlorine, unpleasant smells and tastes, reducing polluting substances. The result is a natural water with the same features of its source, with favourable costs and extreme comfort in use and maintenance. Filtering kit is a filter with the same size of a bottle, to be mounted under the sink, coordinated to a multifunction mixer which supplies warm/cold water like a normal faucet and furthermore it supplies drinking water through a separated distribution to guarantee a perfect hygiene.

MORE PROFIT

The exclusive filtering kit, in addition to ensure a soft and delicate taste, it positively affects the economical aspect. Each person drinks, in average from 1,5 up to 2 litres per day. The cost difference is about 1000 times less than a litre bottle of water, saving in this way time, effort and space. The new range has been designed to ensure the highest quality of water at the lowest possible cost, focusing both on the saving and environmental impact.

MORE ECOLOGY

The filtering kit represents the perfect match between functionality and respect for nature. Thanks to it, the packaging of mineral waters is totally eliminated, being a pollution cause due to its high environmental impact. The plastic bottles production and transport require about 22 oil and 108 litres water, besides the carbon dioxide. Through domestic filtering, the plastic materials can be reduced of 53% compared to traditional range, so to further reduce the environmental impact.

ADVANTAGES:

- Family money saving.*
- Simple installation, it does not involve starting-up or fluxing.*
- Lead and nickel reduction.*
- Reduced size and less plastic material usage.*

Madeira

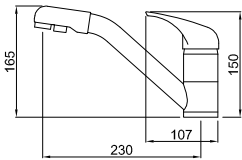

Single lever mixer swivel round spout (Ø 20 mm). Head with two separated distribution valves. Mixer body treated by a **deleading system**. Mixer hole dimensions: Ø 35 mm.

Food Waste Disposer

Costant speed, direct current and lightweight reduces the vibrations and hence the noise, making each heat sink extremely quiet.

Food waste disposer is a modern appliance essential that frees us from wet waste food and makes our lives easier in the kitchen. Just pressing a button the food will be grinded and disposed. Easy to install, not bulky, quiet and safe. Food waste are reduced into small particles and discharged into the sewerage system through the water.

Grinding Area is the heart of **food waste disposer**:

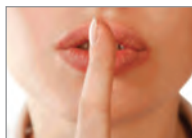

- Made of stainless steel elements specifically designed to work into the water.
- Waste grinding blades, placed laterally inside the chamber for higher safety using.
- All plastic components are enriched with silver ions that generate an adequate antibacterial system crucial to remove all odours.
- Lower weight.
- Powered by current power (DC Motor).

268
269

Our food waste disposer are:
Made in Italy and
100% Italian designed.

Advantages: No bad odours anymore • Saving money • Waste reduction to be disposed • Easier disposal of no-organic wastes • Healthier environment • CO2 Reducing.

Extremely quiet: 40% less than the others

Equipped with sound insulation to reduce noise levels during operation.

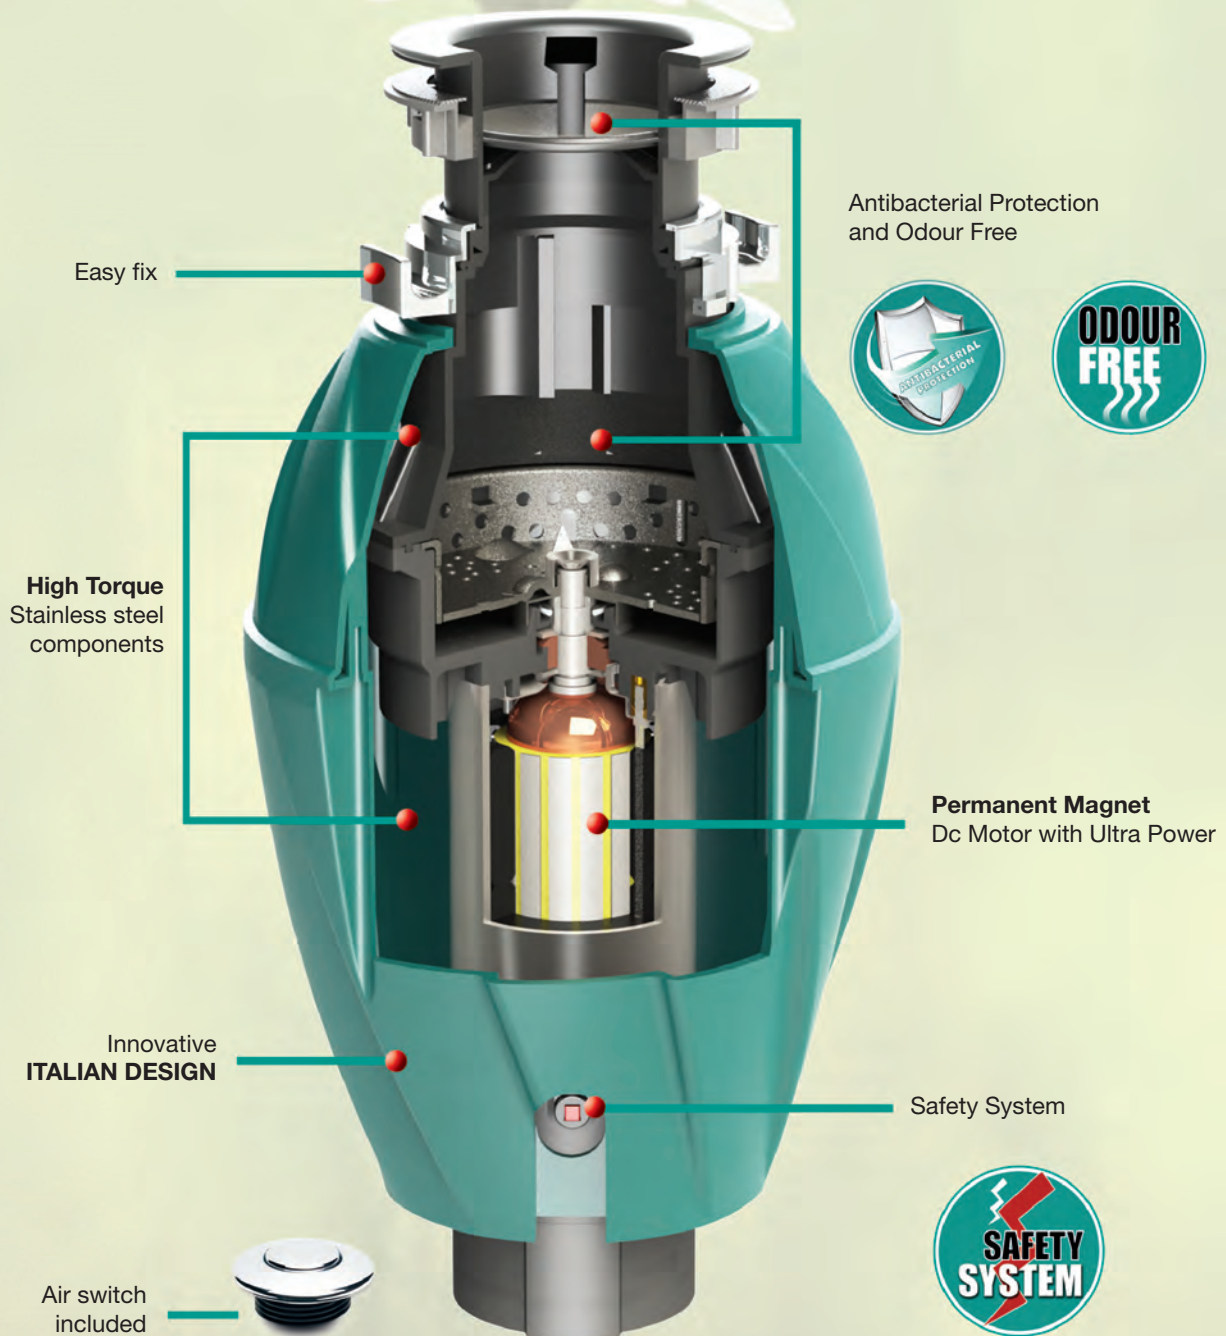

Bigger grinding area

A bigger chamber volume means lower risk of jamming and better grinding.

Through this home appliance, you can dispose of all waste food as: fruits, vegetables, fish bones, eggshell, little chicken bones and many others. It is not possible to dispose of fibrous foods as: artichokes, fennels, pineapple, etc.

Stainless Steel High Quality Parts

Food Waste Disposer Features: Green Power

SAFETY:

- **Thermal lock**, prevents overheating food waste disposer, automatically under protection.
- **Safety System**, reset security system.
- **EMC filter**, filter useful to limit electromagnetic damage.
- **Anti-lock**, tested to avoid any jamming and clogging.

DESIGN:

- **Helix shape carter** made of recyclable plastic in ABS-V2, 100% fire-proof.
- **Recyclable** packaging (no polystyrene).
- Paper info (warranty and brochure) of recycled paper (**FSC certification**).

INSTALLATION:

- Easy and quick.
- Installation available on both round and squared waste drain.
- Installation available also on one-bowl sinks, even with dishwasher connection on the same syphon.

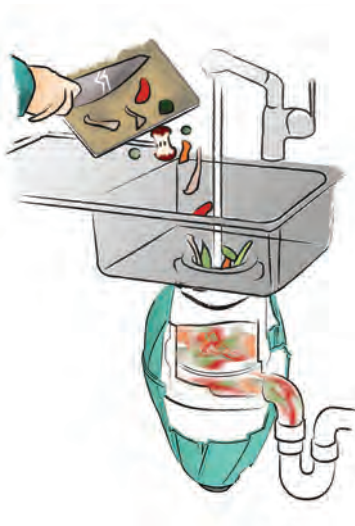

INCLUDED ACCESSORIES:

- Waste pusher.
- Rubber splashguard, removable and washable (including dishwasher).
- Standard cap.
- Drain elbow.
- Pneumatic kit (power button by air, no electronic).

Separately, can also be ordered the Wireless Remote Control useful to avoid the hole on the working top for pneumatic button.

270
271

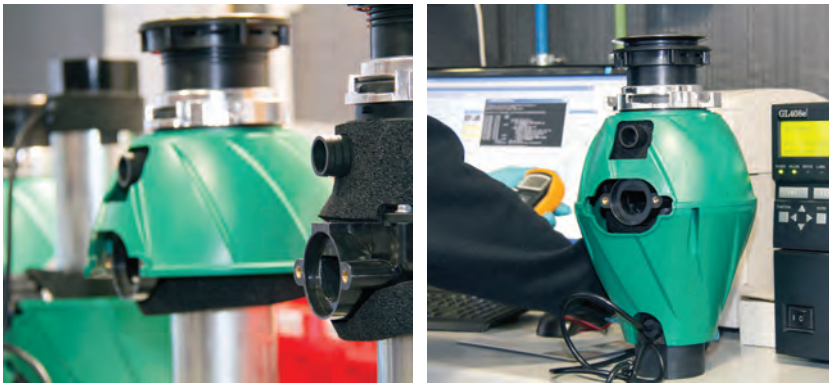

ANTIBACTERIAL TECHNOLOGY permanently molded into the components of our food waste disposers, inhibit the growth of micro organisms and eliminate bacteria-caused odours, bringing great sanitation and health to family.

Installed under the kitchen sink and connected to the drain, the food waste disposer is able to dispose the most of food garbage.

It is a small device to be connected to the kitchen draining water pipe, which shreds all the food waste or leftovers into pieces small enough in order that they can pass through plumbing, and together with water be disposed in the sewage system.

It is safe since it can be activated by a switch, which can be mounted both on the sink and on the working surface. It is safe also because it has not knives or blades: through centrifugal force the garbage is pushed against a toothed element and, by special little hammers, disposed in very small pieces. And finally it is safe because, during the functioning, you have no need to touch electrical switches.

Our excellence is guaranteed by innovative tools, which allow a check during each single piece production.

At the end of line a check about functions and performance will be made following the above criteria:

- **Correct assembling.**
- **Electrical and thermal safety.**
- **Quality of design.**
- **Wet seal.**

Oven Collection

100% Made in Italy

All Elleci ovens are Made in Italy.

Class A Reduced energy consumption

Efficient, eco-friendly and saving. The energetic label allows the consumers to have a standard comparison between the household appliances energy consumptions. All Elleci ovens vaunt Class A, which guarantees efficiency and energy saving, while maintaining the utmost functioning performances.

Tangential Ventilation Cooling Fan

A forced system of air circulation contributes to reduce the heat transfer temperature both in the front and side of our ovens. The tangential ventilation is determined by a fan, which is automatically activated when the oven is turned on. The fan generates an airflow that comes out from the front grids, creating a barrier against the heat from the oven and in the same time cooling the oven handle and its control panel. Air circulation also creates a better heat insulation of electronic components and internal mechanism to ensure an improved reliability and length. In this way condensation is prevented, leaving the glass door always clear for a perfect interior view.

XL cooking space

The large 60 litres cooking space allows a total use with standard size accessories.

Easy Clean Enamel cooking space

By using the particular composition of (nickel-free) enamel, oven internal surfaces are non-stick and cooking space is easier to clean.

Triple glass oven door

Cold door, from which it's possible to see the whole cooking space.

Safe Door

Hypothermic thermal reflective glasses in the door-oven detain the heat produced by cooking, reducing its transmission to the external surface. Heat dispersion and energy consumption are thoroughly reduced.

278
279

Functions and features

Elleci ovens present progressive features both in performances, thanks to the most recent technological innovations, and in fashion and style.

INNER LIGHT:

Oven bulb (is always on during functioning).

DOUBLE UPPER GRILL RESISTANCE

WITH FAN: large ventilated grill area, regulating adjustment from 50°C to MAX

DOUBLE UPPER GRILL RESISTANCE:

large grill area, thermostat regulation from 50°C to MAX.

LOWER RESISTANCE FOR PASTRY:

in function the bottom resistance. Regulating thermostat from 50°C to MAX.

BROWING AND SMALL GRILL UPPER RESISTANCE:

reduced and area grill power, thermostat regulating from 50°C to 200°C.

TRADITIONAL COOKING LOWER AND UPPER RESISTANCE: in function the bottom and the resistance. Regulating thermostat from 50°C to MAX.

INTENSIVE COOKING UPPER AND LOWER RESISTANCE WITH FAN:

thermostat regulating from 50°C to MAX.

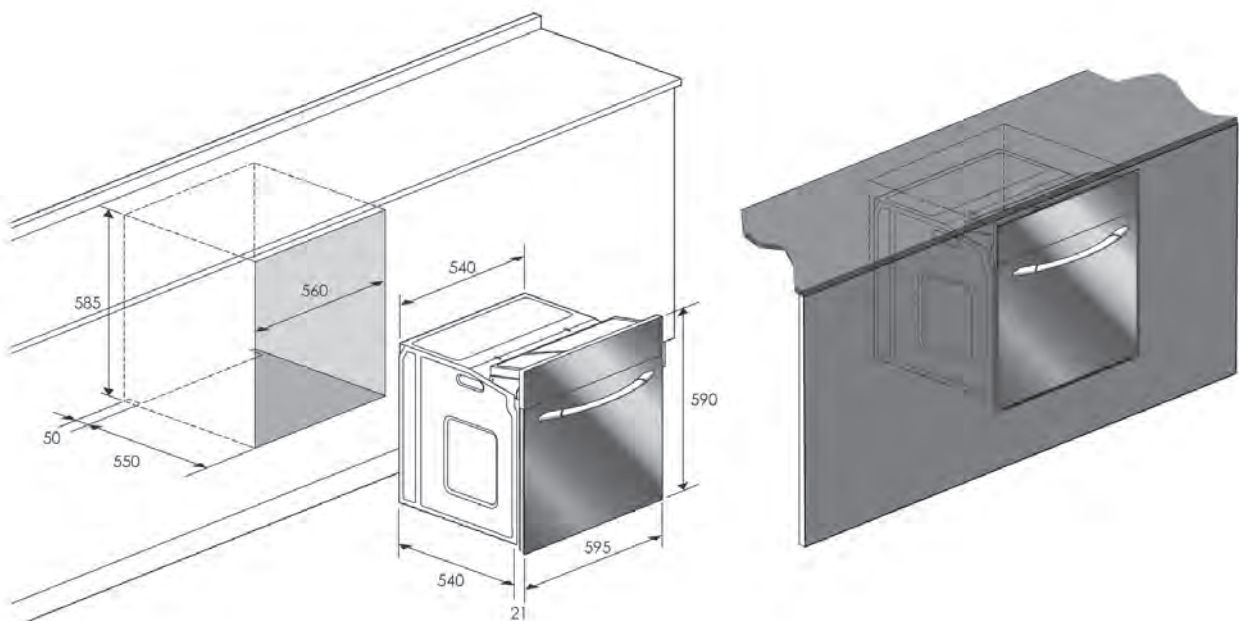

COOK ON MULTIPLE LEVELS CIRCULAR RESISTANCE WITH FAN: regulating thermostat from 50°C to MAX. Hot air is uniformly distributed on different levels.

PIZZA AND BREAD. LOWER AND CIRCULAR RESISTANCE WITH FAN: thermostat regulating from 50°C to MAX.

STYLE

Cooking Tops Collection

100% Made in Italy

All Elleci cooking tops are Made in Italy.

General features

Elleci cooking tops sum up technological innovation and aesthetic creation, they elegantly fit any kind of kitchen furniture and they are the result of the Mediterranean culinary tradition. Their design aims to satisfy the most demanding expectations of those who use them every day.

Enamelled hob

Elleci pays particular attention to the design of its products in order to obtain solid and functional structures with innovative style. Our enameled cooking hob collection enriches each home with refined beauty.

Cast iron pan supports

The cast iron pan supports, proposed in the new collections, are designed to offer a clean aesthetic, preserving the efficiency of the burners, avoiding any dispersion of heat. Heavy-duty cast iron pan supports thanks to a special coating.

Crystal top

The new collection "Quadro" is made of a glass surface with a thickness of 8 mm, bevelled on all four sides, it ensures an adequate thermal resistance and high durability of the product.

292
293

GAS:
cleaner
than other
fossil fuels,
flexibility
of operation
on devices,
cutting-edge
extraction
technology.

Functionalities and features

Elleci cooking tops present advanced features both in performances, thanks to the most recent technological innovations, and in most current fashion and style.

AUTOMATIC UNDER KNOB IGNITION SYSTEM

It is sufficient to press and, at the same time, rotate the knob until both gas supply and sparks, necessary to ignite the burner, are activated.

SAFETY VALVE

GasProtekt: it stops gas supply in case of accidental switching off.

CAST IRON PAN SUPPORT

The pan support plays an essential role. Sturdy, heavy, stable, beautiful and perfectly functional, they are able to transfer a suspension feeling while maintaining utmost stability to every kind of pan. The absence of sharp edges for an easy cleaning.

BURNERS

A triple crown (nr. 3 powerful fire circles) is able to develop and evenly distribute the heat, reducing the cooking time accordingly. The better distribution of heat under the pot maximizes power and enables a fast and homogeneous cooking.

Hoods Collection

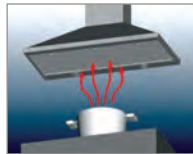

100% Made in Italy

All Elleci cooker hoods are Made in Italy.

How to choose a hood

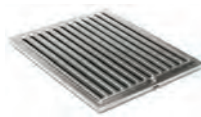

Before any other choice, it is important to identify the model of hood which aesthetically best suits to the furnishing of your kitchen and, in any case, reflects your own taste. Elleci offers a complete range both from a functional point of view and of the design, allowing a good match with our sinks, mixers, hobs and ovens: the SUITE Elleci.

Hoods

All Elleci models can operate as extractor hood, in which air is evacuated outside. The hood is equipped with a particular valve that allows the expulsion of cooking vapours, but avoiding cold air penetrating from the outside into the house. In case there is no possibility draws off the air outside the dwelling, it is necessary to fit the hood with a charcoal filter (thus operating as a filtering hood), by means of which, air is purified and then fed back into the environment. This option requires a careful maintenance of the carbon filters. The pipe diameter must be adequate (at least 120 mm) and should not be excessively long and winding, as this will affect the performance of the hood.

316
317

Grease filters

The grease filter is always needed having a dual function in the hood. The grease filter protects the internal parts of the hood, avoiding fat particles to affect the electrical components, especially the engine.

Charcoal filters

Charcoal filters should be mounted only when the hood is installed in suction version and act as real air purifiers. This feature is made possible by the enormous capacity of this vegetal material, the activated carbon, to retain particles and substances, before air is blown again into the environment. The charcoal filters cannot be washed or regenerated and must be replaced periodically. The saturation of the activated carbon depends, more or less, on the prolonged use of this device, the type of cooking and the regularity with which the grease filter is cleaned. Each Elleci hood is equipped with timer, intensive speed, filter saturation indicator and the **Clean Air** function, which ensures a continuous air exchange, in the complete absence of noise.

Clean Air

By keeping pushed Timer button for 3 seconds, Clean Air function automatically activates the hood for 10 minutes every hour, guaranteeing a continuous air exchange in the kitchen and even in the living room, when connected.

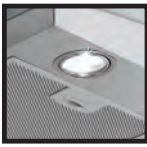

Functionalities and features

Elleci hoods present advanced features both in performances, thanks to the most recent technological innovations, and in most current fashion and style.

ACOUSTIC IMPACT

The advanced engine technology allows to increase the comfort even in case of high suction speed.

LIGHTING

All Elleci hoods are quipped with halogen lamps with a lower energetic consumption, they improve a lower energetic consumption, they improve the visibility combining it with energy saving.

TIMER

It offers three options: 10, 15, 20 minutes for the delayed switching off obtaining the perfect suction after any cooking.

Accessories

A richer and studied accessories outfit features our sink proposals. For each of our model a accessories series is provided for enriching the aesthetics and functionality of our sinks. We studied integrated systems of accessories, which exploit each of your movement.

326
327

The wide range of cutting boards includes wooden proposals, particularly wear and tear resistant, for ensuring hygiene and long lasting. Solutions made up of glass and plastic materials complete our offer. Baskets, bowls and dish-drainers enrich the range for helping you in your kitchen activities.

elleci waste drains

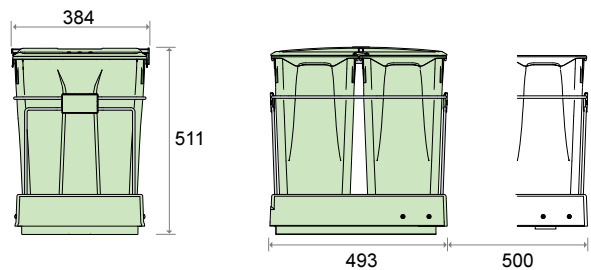

ECHO waste bins

Great capacity separate collection

Conceived for everyone who wishes a waste bin fit for voluminous separate collection. Three containers with a 65 litres total capacity allow to completely exploit the inner cabinet room. The swiveling lid assures both a practical use and excellent closing as well; the waste bins run out by total extraction slides. Fixing to the bottom of the cabinet.

- Containers: 2x30 L, 1,5 L.
- Height 51 mm: suitable for cabinet placed under the SIR.
- Full extraction slides.
- Suitable for 450 mm base.
- Fixing to the bottom of the cabinet.
- Colour: light grey.

WASTE BINS	CODE
ECHO 4565	APR02300

For the first time it is possible to place 65 litres containers under the sink, thanks to the Elleci patented compact draining system: **ELLECI SIR.**

Cleaning products

Specific and effective detergents for the cleaning and treatment of our products.

1. ORDINARY MAINTENANCE

The best way to clean the sink is to use a cloth or a soft sponge diluting detergents commonly used with warm water. It is recommended not to use aggressive detergents.

It is recommended to rinse the sink surface with water, drying the humid parts with a spongy cloth. All these cares will contribute to prevent limestone formation, above all upon dark coloured sinks.

2. STUBBORN STAINS REMOVAL

Stubborn dirt traces can be removed with a cloth soaked into bleach diluted with water or with alcohol or, in extreme cases, with acetone. After this operation carefully rinse the surface with water.

3. EXTRAORDINARY INTERVENTION

The sink is made up of a mixture with a high percentage of fillers, which make the product very hard and resistant. This can cause formation of streaks as a result of continuous rubbing of metal pans. A streak is a little metallic particle releasing and it can be removed with brushes and commonly used detergents.

4. FURTHER SUGGESTIONS

Do not use highly alkaline substances such as ammonia or caustic soda. Do not place hot pots or coffee machines directly on the sink (in some cases, just taken off from fire they can reach up to 500°C). Do not pour boiling oil, pipes could be clogged and be damaged by deformations. Do not cut directly on the sink surface, we recommend to use the proper cutting board. Limestone residuals are removed with vinegar or acetic acid.

31

Composite sinks

Elleci Beauty SPA for Granitek, Metaltek e Vitrotek. A 500 ml bottle.

For an accurate cleaning of sinks in Vitrotek, Metaltek and Granitek. Effective stains removal. Instructions for persistent stains: to pour the detergent on the stained part and leave it acting for 1-2 minutes and remove, making a light pressure. Shake well before using.
